CARLYLE COLLECTIVE

BY HESSENTIA

DESCRIPTION

Petra is a storage unit composed of two symmetrical, oval-shaped elements conceived as compact, monolithic volumes. The soft, flowing lines soften the solidity of the structure, transforming its geometry into a sculptural presence, as if naturally shaped and smoothed by the passage of time. The white concrete surface includes chips of Carrara Bianco and Giallo Siena marbles. The stones emerge within the material in an irregular distribution, creating a pattern reminiscent of a spontaneous mosaic and revealing the meeting of different marble fragments. The white concrete is interspersed with the colours and veining of marble. The size, colour and arrangement of the marble chips vary from one piece to another, creating variations inherent in the nature of the process. In Petra, the material does not simply clad the volume: it seems to shape and define it. Concrete and marble chips become a single surface, continuous yet never uniform, whose appearance changes with light and viewing distance. Another distinctive feature of the storage unit is its metal top, with an expressive finish that combines artisanal skill and artistic sensitivity. Petra storage unit expresses HESSENTIA's exploration through soft shapes and authentic material, balancing the strength of the monolith with the lively irregularity of the decorative finish. HESSENTIA can customize this piece to suit your project needs. Some limitations apply.
