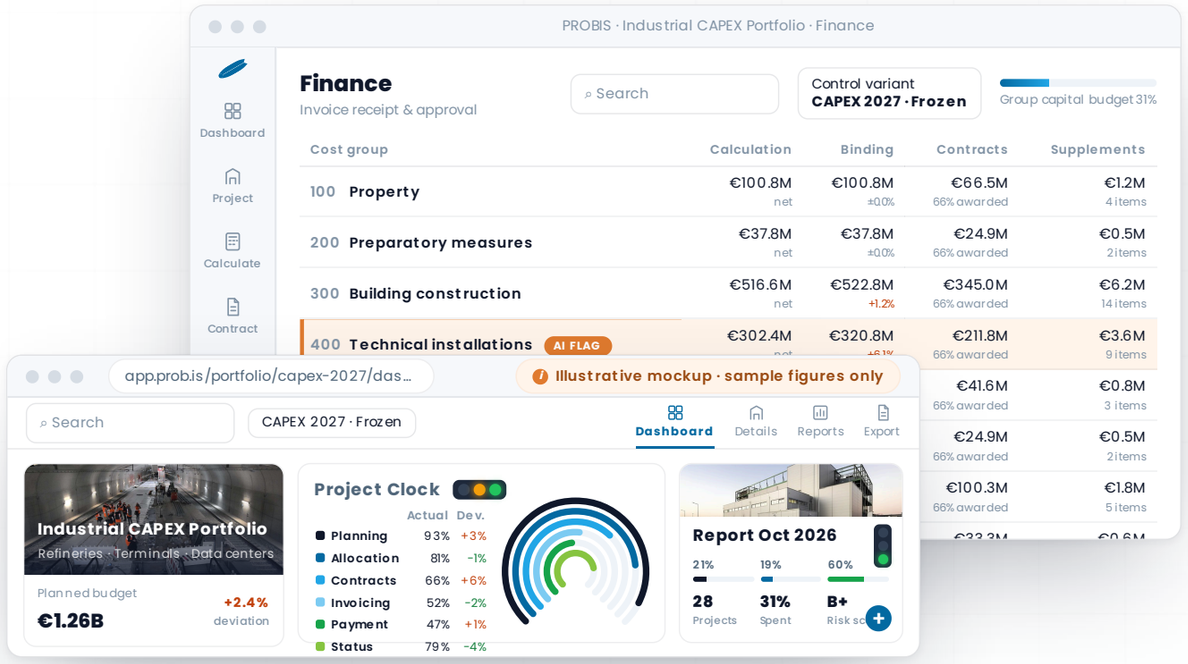
REAL-TIME CAPEX CONTROL WITH PROBIS AI

Real-time CAPEX control for refineries, infrastructure *and data centers.*

Automated multi-project cost control built for refinery-grade complexity. AI-driven cost, liquidity and performance oversight across BP Europa's industrial, infrastructure and data center investment programs.



01 Built for

- Refinery and fuels supply operators
- Industrial and energy infrastructure developers
- Capital project and portfolio managers
- Executive board and finance stakeholders
- EPC and engineering contractors
- Data center and digital infrastructure teams

02 What we address

- Multi-source reporting burden across refineries, terminals and sites
- Siloed project and financial data across business units
- Fragmented systems across CAPEX, OPEX and data center environments
- Limited real-time visibility into portfolio-wide spend
- Elevated delivery and financial risk on major capital programs

03 Your value with PROBIS

- Real-time transparency across every refinery, terminal and site
- Automated reporting for faster stakeholder alignment
- Early risk detection across capital, infrastructure programs and data centers
- Benchmark-driven insights for capital allocation decisions
- End-to-end control from planning through operations

−35% Risk reduction

+20% Return on asset investment

+15% Value increase

Fraport

Frankfurt Airport: *Terminal 3 & Southern Expansion.*

€5B+	45	2017
Total program volume	Sub-projects	PROBIS in use since

PROBIS is used by many international airports worldwide, including the renowned **Fraport AG** in Frankfurt, Germany, to optimize financial reporting, cost control and general financial management across all real estate assets.

One of the outstanding implementations of PROBIS is the southern expansion of Frankfurt Airport, including the construction of Terminal 3: an extensive project of 45 sub-projects with a total volume of over €5 billion, coordinated across dozens of contractors and stakeholders.

Since 2017, Fraport AG has relied on PROBIS as its central and binding reporting, demand notification and cost control system for all projects. Thanks to its cloud-based architecture, PROBIS provides an up-to-date overview of cost status and forecasts for all sub-projects, presented in clear dashboards, ensuring transparent and efficient management of all financial measures.
