# Secure, regulatory and efficient UDI compliance

– without unnecessary manual work

GS1 UDI Link helps the regulatory team meet EUDAMED and Swissdamed requirements accurately and on time by bringing UDI reporting together in a single standardised, validated data flow.

## The value for the regulatory team

### 1. One submission – multiple authorities

*UDI data is entered once via the GS1 data model and automatically distributed to EUDAMED and Swissdamed. This reduces duplicate work and the risk of inconsistencies.*

### 2. Built-in data validation = fewer rejections

*The solution ensures mandatory fields and formats are correct before submission. This reduces regulatory errors, resubmissions and audits.*

### 3. Clearer compliance oversight

*Consistent, up-to-date data provides stronger documentation, traceability and control during inspections and regulatory dialogue.*

### 4. Less manual work – more professional focus

*Less time spent in portals, Excel spreadsheets and corrections – more time for interpreting regulations, risk management and quality.*

## In short

**GS1 UDI Link** cuts the complexity of regulatory reporting and turns compliance into a controlled, efficient and fully auditable process.
