Romexis | Pearl

Supercharged clinical performance, powered by AI.

Pearl's pioneering dental AI software elevates your practice with superhuman radiologic precision and potent clinical insight. With an always-on chairside dental assistant reading your x-rays in real-time and automatically syncing patient data from your PMS to surface hidden treatment needs, your team will consistently deliver the highest standard of care, increase patient satisfaction and stimulate production across your practice.

Embrace the power of AI to elevate your dental practice performance and grow like never before.

Read x-rays more accurately

Real-time results from dentistry's most capable AI detection aid help you read x-rays and spot up to 37% more disease while your patients are still in the chair.

Strengthen patient trust

Color-coded detections, educational tooth part maps and quantitative results give patients an objective, clear and data-based foundation for trust in your findings.

Increase case acceptance

Patients are 24% more likely to accept treatment when you have AI enabling earlier disease detection, more trusted diagnoses and team-wide clinical alignment.

Boost production

Grow your practice with a suite of AI features to surface unmet treatment opportunities, increase recall, boost insurance claim approvals, and maximize your chairtime.

Maximize efficiency

Whether for front office tasks like scheduling and recall or clinical activities like morning huddles and patient care, AI improves practice-wide alignment and workflow efficiency.
