## Risk Rating

| Low | Low to Medium | Medium | Medium to High | High |
|---|---|---|---|---|
| | | | | ■ |

All investments involve risk. The value of an ETF can go down as well as up and you could lose money. The risk of an ETF is rated based on the volatility of the ETF's returns using the standardized risk classification methodology mandated by the Canadian Securities Administrators. Historical volatility doesn't tell you how volatile an ETF will be in the future. An ETF with a risk rating of "low" can still lose money. For more information about the risk rating and specific risks that can affect an ETF's returns, see the prospectus.

## Portfolio Strategy

The SavvyLong (2X) Constellation Software ETF seeks daily investment results that endeavour to correspond, before fees, expenses, distributions, brokerage commissions and other transaction costs, to two times (2X) the daily return (on a percentage basis) of the common stock of Constellation Software Inc. (ticker: CSU).

## Fund Performance

Returns are not available as this ETF has less than one year's performance data.

## Sector Allocation

| | |
|---|---|
| Information Technology | 100% |

## Top Holdings

## SavvyLong (2X) Constellation Software ETF

Data as of: September 30, 2026

This ETF is an alternative mutual fund, as such, CSUU is permitted to invest in asset classes or use investment strategies that are not permitted for other types of mutual funds. In addition, the ETF is concentrated and non-diversified, meaning it is only exposed to a single common stock. As a result, the ETF's assets are more susceptible to the impact of any specific company event, or single economic, technological, or regulatory event, compared to a diversified portfolio.

This ETF is highly speculative. CSUU uses a significant amount of leverage which magnifies gains and losses. It is intended for use in daily or short-term trading strategies by very knowledgeable, sophisticated investors. If you hold this ETF for more than one day, your return could vary considerably from the ETF's daily target return. For example, you could lose your entire investment in one day if the underlying index of the ETF experiences a single-day price movement that is greater than 50%. The negative effect of compounding on returns is more pronounced when combined with leverage and daily rebalancing in volatile markets. CSUU is not suitable for investors who do not intend to actively monitor and manage their investments.

This material is for informational purposes only. This material is not intended to be relied upon as research, investment, or tax advice and is not an implied or express recommendation, offer or solicitation to buy or sell any security or to adopt any particular investment or portfolio strategy. Any views and opinions expressed do not take into account the particular investment objectives, needs, restrictions and circumstances of a specific investor and, thus, should not be used as the basis of any specific investment recommendation. Investors should consult a financial and/or tax advisor for financial and/or tax information applicable to their specific situation.

The indicated rates of return are the historical annual compounded total returns including changes in unit value and reinvestment of all distributions and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any securityholder that would have reduced returns.

All monetary figures are expressed in Canadian dollars unless otherwise noted.
