LIFT TRUCK - WALKIE STACKER TRAINING

Program Overview:

The Walkie Stacker Training Program consists of a theory session, which covers all aspects of the Walkie Stacker safety and operation and a practical assessment if requested by the workplace.

Walkie stackers (also known as pallet stackers) are commonly used in warehousing and production facilities. Walkie Stackers are easy to maneuver, and their lifting capacity make them a popular choice for racking. Although they make lifting and transporting palletized goods easy, pallet stackers can pose several safety risks to new and inexperienced users. This training discusses the safe practices and standards to minimize the risk of injury to workers and damage to products.

Training Content:

- Based on CSA Standard B335:25
- Ministry of Labour Training and Skills Development Expectations
- OHSA & Regulation 851 including Roles and Responsibilities
- Workplace Hazard Identification and Risk Assessments
- Training and Qualifications for the Walkie Stacker Operator
- What makes the Walkie Stacker different than other lift trucks used in the workplace
- Safe Practices and Procedures
- Pedestrian Safety
- Pre-operation inspections
- Stability Triangle, Load Stacking, Traveling with & without a load
- Practical Assessment

Course Duration: Four (4) hours dependent upon number of participants – which includes theory and a practical assessment. Online, self-paced.
