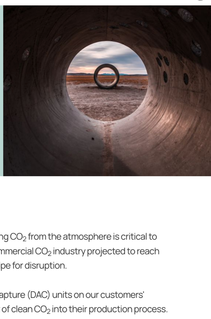
OUR CO_2

Let's clear the air

Climate change is a fact of the present, and mitigating its effects is the challenge of our lifetime.

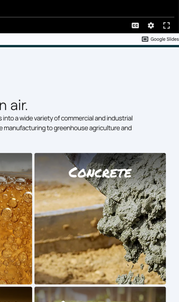


Of the many parts of the equation, removing CO_2 from the atmosphere is critical to slowing down climate change. With the commercial CO_2 industry projected to reach $6Tn by 2050, it's ripe for disruption.

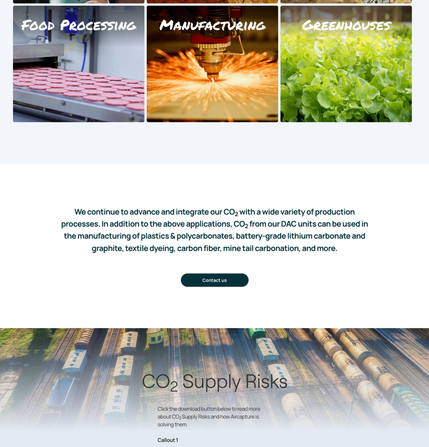
Aircapture installs modular Direct Air Capture (DAC) units on our customers' manufacturing sites, creating a direct supply of clean CO_2 into their production process.

By commercializing atmospheric CO_2, we believe Aircapture's DAC technology is the most effective, scalable solution to radically improve the environment, the economy and our lives.

Our hyper-local approach de-risks customers' supply chains and eradicates the carbon footprint of the conventional market. We get you the clean CO_2 you need, reliably.



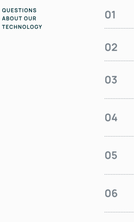
WATCH OUR TECHNOLOGY IN ACTION

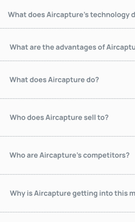


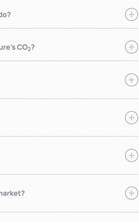
MARKETS SERVED

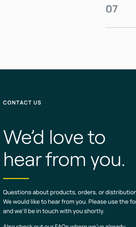
Cleaner than air.

Aircapture's technology fits into a wide variety of commercial and industrial applications, from beverage manufacturing to greenhouse agriculture and beyond.









We continue to advance and integrate our CO_2 with a wide variety of production processes. In addition to the above applications, CO_2 from our DAC units can be used in the manufacturing of plastics & polycarbonates, battery-grade lithium carbonate and graphite, textile dyeing, carbon fiber, mine tail carbonation, and more.
