— PROBIS AI LABS

AI agents that act on *real cost logic.*

8 h → min
Report assembly time

Any date
Cut-off reporting on demand

Live
Refresh on every invoice or approval

PROBIS AI Labs is the intelligence layer on top of PROBIS, creating customer-specific AI use cases, agents and satellite products for the financial steering of complex construction, infrastructure and real estate portfolios: budgets, forecasts, cash flows, procurement, change orders, invoices, risks and benchmarks. The key advantage: PROBIS AI agents act on real cost logic instead of interpreting isolated documents.

CASE STUDY · AI REPORT BUILDER

A multi-billion-euro infrastructure owner managing dozens of concurrent capital projects needed cut-off-date commercial reports at any reference date, structured along its own dimensions (asset, region, funding source, project phase), without a controller rebuilding the report from scratch each cycle.

Because its project and portfolio structure already lived in PROBIS as governed, structured data, PROBIS AI Report Builder did not need to interpret static spreadsheets or scattered documents. It queried the same real cost logic already driving budgeting, procurement and invoice verification. A report that previously took a controller 8 hours to assemble now regenerates in minutes, in the exact format each steering committee expects, refreshing automatically whenever a new invoice, budget change or approval hits the platform.
