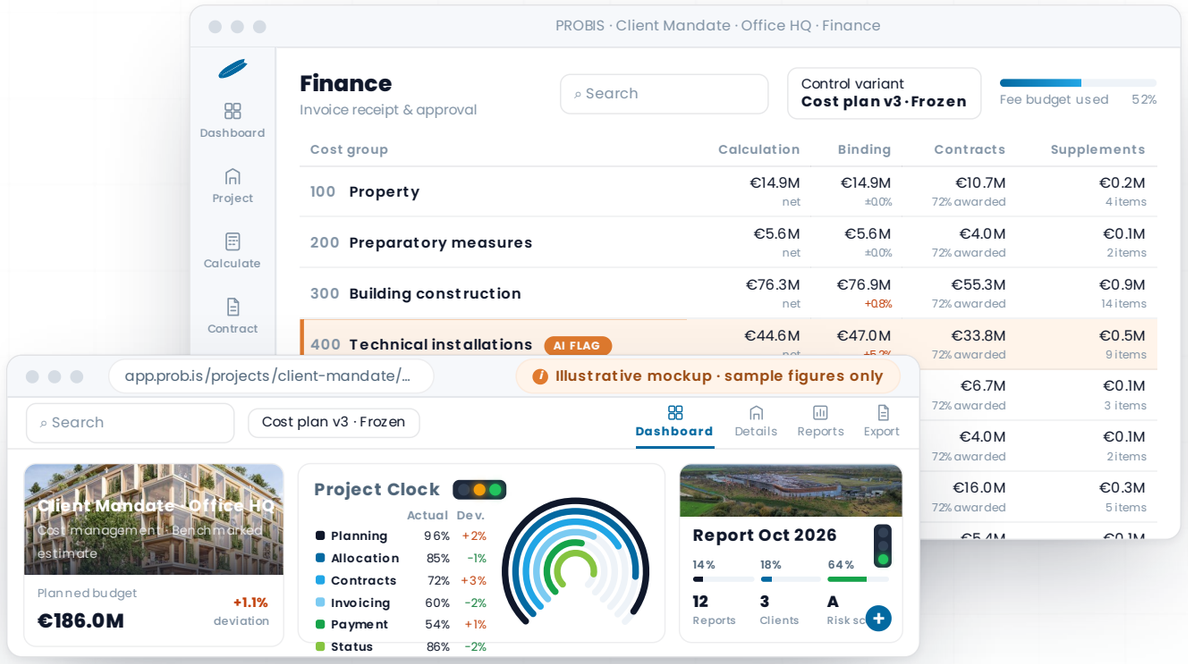
REAL-TIME PROJECT INTELLIGENCE

Real-time project intelligence *for project managers.*

Automated project and cost control built to meet consultancy, CBS and IFRS standards, with AI-driven cost and performance oversight for real-time decisions. Used by leading project managers and controllers.



01 Built for

- Project managers
- Full-service providers
- Cost consultants
- Quantity surveying firms
- Project monitors
- Advisory teams
- Regional and global consultancies

02 What we address

- Siloed project and cost data
- Fragmented multi-stakeholder inputs
- Inefficient budget and progress tracking
- Difficulty tracking fee value and ROI to clients
- Time lost rebuilding cost estimates from scratch for every new RFP
- Inconsistent methodology across teams and offices

03 Your value with PROBIS

- A unified, real-time project control environment that integrates with Excel
- Automated reporting and invoice workflows
- Monetized data benchmarking and intelligence
- AI-driven intelligence for the financial certainty clients demand
- Proactive risk identification and mitigation
- Structured oversight for faster decisions and higher ROI

+20% Fee revenue

+30% Chance of winning RFPs

-70% Time spent on reports

RELEVANT CASE STUDY

Consultants: *proprietary benchmarks in their own instance.*

Own
Protected database instance per consultant

Reuse
Cost intelligence on the next mandate

Client-ready
Reporting, immediately

PROBIS is used by leading real estate and construction consultants such as JLL, CBRE, Cushman & Wakefield, Drees & Sommer and Mailänder Consult as their dedicated commercial control and benchmarking platform. Each consultant operates on its own protected database instance, using proprietary project data as the foundation for benchmarking, cost planning and portfolio steering across clients, locations and asset classes.

Gardiner & Theobald (G&T), a leading international cost and project management consultancy, runs its Rolls-Royce Paint Shop mandate in Chichester, England on PROBIS. G&T uses its proprietary project history as the foundation for cost planning and progress reporting, benchmarking new estimates against comparable completed projects rather than building each one from scratch.

The results are sharper estimates prepared faster, immediate client-ready reporting for Rolls-Royce, and a growing base of proprietary cost intelligence G&T can reuse on its next mandate, all without exposing data outside its own instance.
