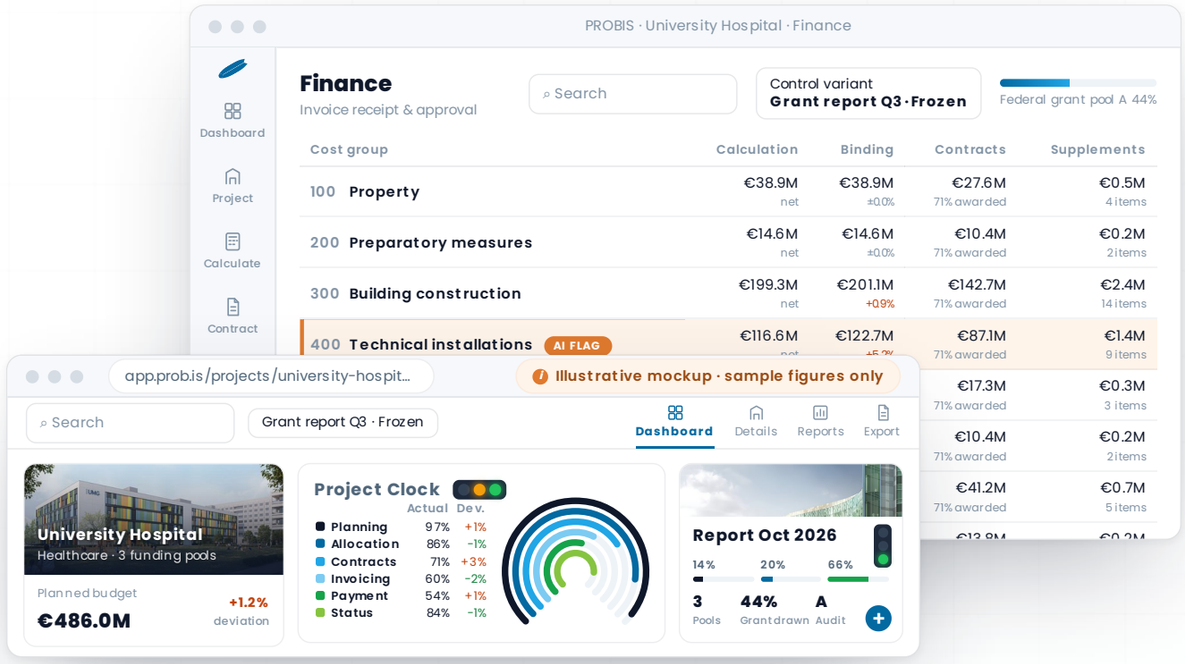
REAL-TIME PORTFOLIO & PERFORMANCE CONTROL

Real-time portfolio and performance control *for hospitals and healthcare real estate.*

Automated portfolio and asset control built for corporate-grade governance. AI-driven cost, performance and compliance oversight, including monitoring of federal grants and subsidies, with distinct funding pools tracked separately to keep publicly allocated resources fully traceable.



01 Built for

- Corporate real estate management teams
- Large corporates and global enterprises
- Asset and portfolio management teams
- Institutional owners and corporate investors
- Facility and property management organizations

02 What we address

- Multi-source reporting burden across corporate portfolios
- Siloed operational and financial property data
- Fragmented systems across assets and regions
- Limited real-time portfolio performance visibility
- Reactive asset management and decision processes

03 Your value with PROBIS

- Real-time transparency across global property portfolios in OPEX and CAPEX
- Automated reporting for faster corporate decision-making
- Early risk detection across assets and operations
- Benchmark-driven insights for performance optimization decisions
- End-to-end control across asset and portfolio lifecycle

−35% Project risk

+20% Return on asset investment

+15% Value increase

RELEVANT CASE STUDY

Healthcare: *audit-ready controlling for publicly funded projects.*

DATEV
Bidirectional, redundancy-free integration

Per pool
Grants and subsidies tracked separately

Audit-ready
Documentation at every stage

Healthcare construction and development operates under tight financial oversight. For organisations in this space, the limitations of Excel-based controlling are more than inconvenient: they are a genuine compliance and operational risk that scales with every project added to the portfolio.

More healthcare clients are adopting PROBIS to replace fragmented spreadsheets with one centralized controlling platform, tailored to cover reporting, billing, authorization and data migration, with DATEV integration ensuring redundancy-free, bidirectional data exchange from day one.

Healthcare projects often draw on multiple funding sources at once, so federal grants and subsidies must be monitored with distinct funding pools tracked separately. PROBIS handles this directly within the platform, delivering audit-ready documentation at every stage.

The results are consistent: improved data quality, reduced administrative overhead, and a level of controlling transparency that matches the public accountability these organisations carry.
