

Unlock DevOps. Automate Everything

DevOps is dragging your team down.

Teams face tool sprawl, manual infra work, and compliance overhead. Developers and Operations lose hours to tickets instead of shipping features. When you take the burden of DevOps off of the Developer's shoulders, teams can focus on building, innovating, and delivering faster. AI has transformed engineering and business functions, but DevOps is still stuck with read-only tools that can't act or fix issues in real time.

Meet DuploCloud

DuploCloud's AI-powered automation platform puts cloud ops on autopilot by provisioning, securing, and ensuring compliance.

Real-time AI agents execute complex workflows, resolve issues across your stack, and replace tool sprawl so teams move faster, stay compliant, and can focus on building great products. Removing the grind of infrastructure and compliance, frees developers to spend their energy on innovation and shipping features that matter.

DevOps Automation Platform

Too much time setting up infra?

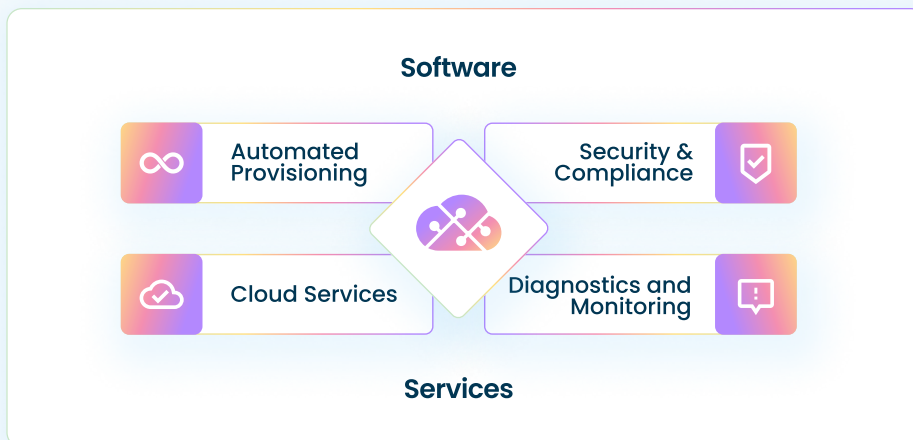

Most teams waste weeks wiring up cloud infra, CI/CD, IAM, and compliance—and still end up with fragile, insecure environments.

DuploCloud automates it all in your cloud.

- Provision production-grade infra—no scripting required
- Pre-wired CI/CD, IAM, and compliance built-in
- Go live on AWS, Azure, or GCP in under 30 days

Supercharged DevOps Automation eliminates the need for DIY DevOps or that makes DevOps engineers 3x more effective.

➔ **Included:** Hands-on onboarding, implementation, 24/7 support from enterprise-grade DevOps veterans

What Teams Unlock with DuploCloud

10×
faster time to market

75%
lower DevOps costs

80%
less cloud operations work

🔍 Advanced Observability Suite (AOS)

See everything. Fix faster.

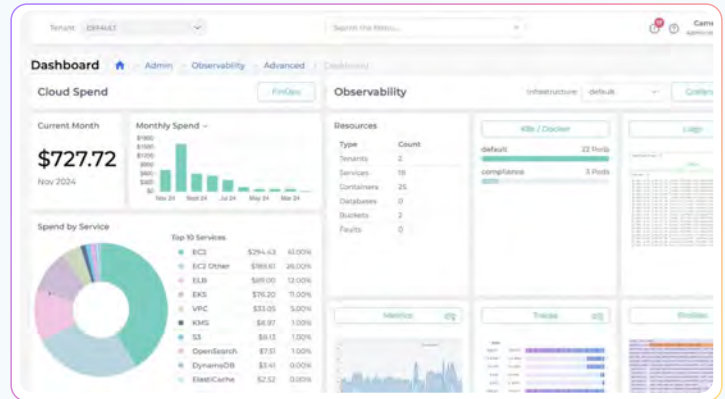

Get full-stack visibility across your infrastructure, services, and workloads right out of the box.

All the essential observability features in one place, without unnecessary complexity.

- Centralized metrics, logs, and traces
- Real-time dashboards and alerts
- Built-in observability to troubleshoot faster and reduce downtime

Stay ahead of issues with a pre-integrated observability layer designed for devops speed.

Agentic Help Desk

Your AI teammate for DevOps execution

Most DevOps teams chase alerts across dashboards instead of solving the root problem.

DuploCloud's agentic Help Desk integrates directly into your infrastructure, using real-time context to take action—not just notify or recommend.

- Executes complex tasks like scaling, patching, rollbacks, and IAM fixes
- Triggered by natural-language requests or system-level events
- Includes human-in-the-loop approvals, rollback safeguards, and full audit trails

No more juggling dashboards and stitching workflows—just agents built to execute. **Agentic Help Desk is best for teams with a DevOps engineer, meaningful cloud spend, and a need to scale fast.**

Can you identify the missing SOC2 controls in my staging environment and help fix them? Start with alarms

Sure. We have following 5 missing alarms::

- a. IAM Policy Changes
- b. Unauthorized Access Attempts
- c. Security Group Changes
- d. Root Account Usage
- e. MFA Changes

Do you want me to make changes via Terraform or via command line?

You can review my changes before I apply them.

"The DuploCloud platform is extremely simple to use and hides all the DevOps complexities of running over one hundred microservices in a secure and compliant application."

Saurabh Saxena, V.P. of Engineering, Uniphore
