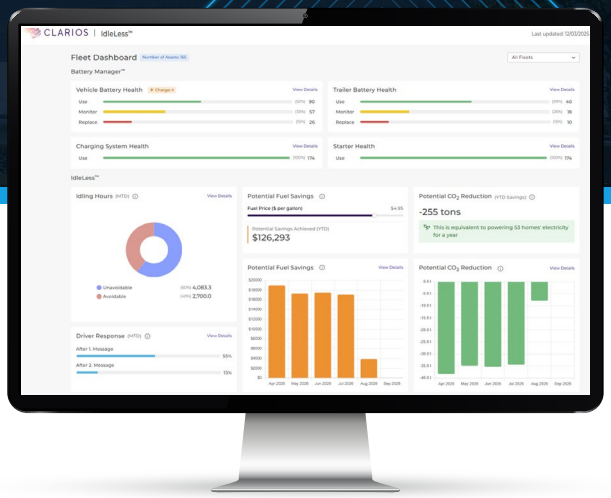
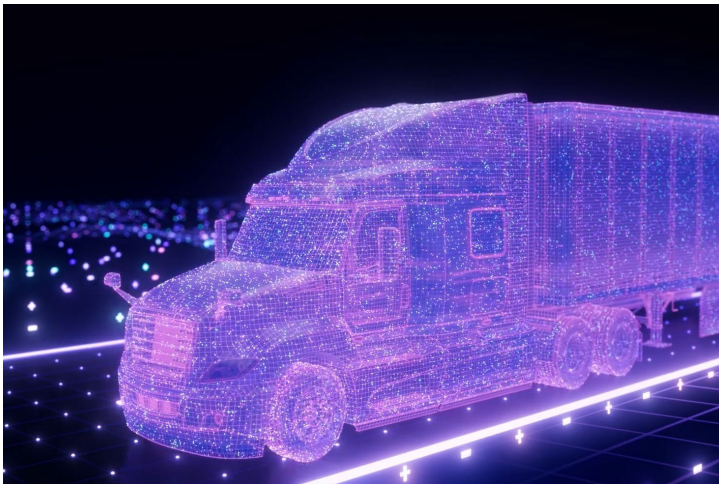
CLARIOS

IDLELESS™



Reduce unnecessary idling. Make every start and stop smarter.

IdleLess uses real-time battery monitoring and actionable driver alerts to help fleets maintain optimum battery charge while reducing unnecessary engine idling, fuel consumption and emissions.



ABOUT CLARIOS IDLELESS

IdleLess turns real-time battery data into smarter idling decisions, using actionable insights to help drivers know when to start and stop the engine while maintaining battery charge. By reducing unnecessary idling, **IdleLess** helps fleets lower fuel costs, reduce engine wear and emissions, while keeping drivers comfortable.

IDLE LESS. SAVE MORE.

Unnecessary idling burns fuel, increases emissions and adds vehicle wear, but drivers still need confidence that the battery has enough charge to restart the engine. **IdleLess** uses real-time battery charge monitoring and actionable alerts to help drivers know when to start and stop the engine.

Up to ***$4,500*** savings per vehicle, annually [1]

Up to ***60%*** lower truck idling [1]

[1]*Based off 60% reduction in average long haul truck idling time. Based off a fleet containing 100 vehicles.*

FEATURES + BENEFITS

REDUCE UNNECESSARY IDLING

Use real-time battery data and actionable alerts to help drivers make smarter start and stop decisions.

LOWER FUEL COSTS

Reduce unnecessary idling to lower fuel consumption and associated operating costs.

REDUCE EMISSIONS

Reduce CO_2 emissions by up to 8.6 metric tons per year through less unnecessary idling.

REDUCE ENGINE WEAR

Reduce unnecessary engine runtime to help limit wear associated with excessive idling.

SUPPORT DRIVER COMFORT

Maintain reliable power for hoteling functions, helping drivers spend more time resting and less time worrying about battery charge.

TURN DATA INTO ACTION

Monitor battery health, vehicle idling time and cost savings to support more informed fleet decisions.

Connected Services is not about batteries alone. It is about helping fleet operators make better operational decisions and turning battery data into meaningful business outcomes.
