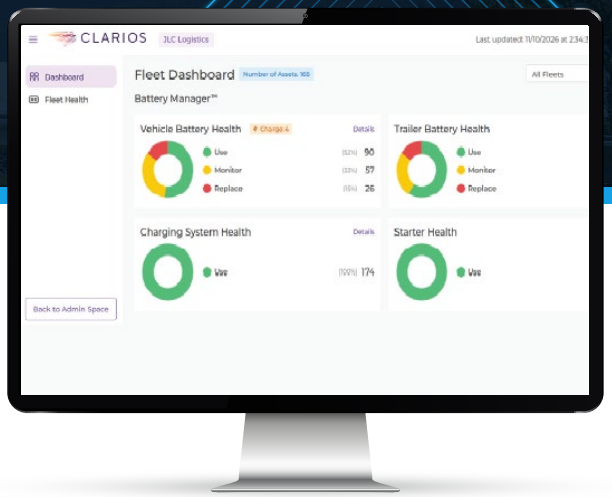
CLARIOS

BATTERY MANAGER PRO™



Fleet Batteries. Handled.

Take the complexity out of fleet battery management. **Battery Manager** Pro combines remote low-voltage system monitoring, predictive and prescriptive insights, and replacement battery delivery in a subscription-based solution designed to help reduce unexpected downtime.

ABOUT CLARIOS BATTERY MANAGER PRO

Backed by Clarios' deep expertise in battery technology, **Battery Manager Pro** combines battery intelligence and replacement battery delivery in a single monthly subscription, helping eliminate manual battery testing and replacement ordering so fleets can spend less time managing batteries and stay focused on their operations.

LESS BATTERY MANAGEMENT. MORE UPTIME.

Without reliable visibility into battery and low-voltage system health, fleets may replace batteries too early or risk unexpected downtime. **Battery Manager Pro** uses remote, near real-time monitoring and predictive and prescriptive insights to flag battery, charging-system and starter concerns and guide action. When replacement is needed, the right battery can be coordinated and delivered.

FEATURES + BENEFITS

REMOTE BATTERY MONITORING

Monitor battery health across your fleet without routine manual testing.

PREDICTIVE + PRESCRIPTIVE INSIGHTS

Identify battery, charging-system and starter concerns and understand what action to take.

PROACTIVE BATTERY REPLACEMENT

Identify replacement needs before failure and get the right battery delivered when needed.

MAXIMIZE BATTERY LIFE

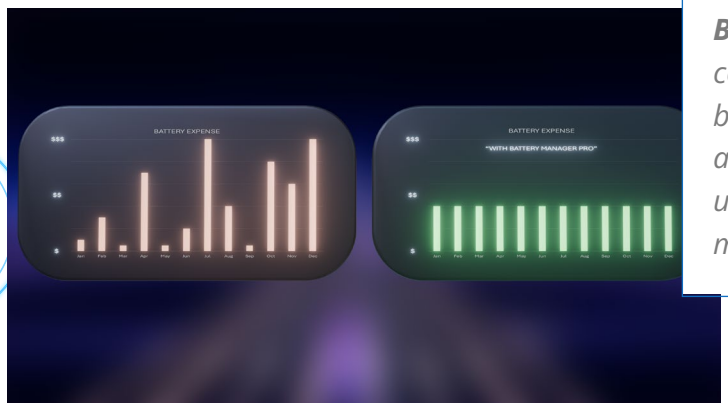
Get more useful life from your batteries by making replacement decisions based on battery condition, not age alone.

RIGHT BATTERY. RIGHT APPLICATION.

Match the right replacement battery to each vehicle and duty cycle.

MORE PREDICTABLE BATTERY COSTS

Manage battery expenses more predictably with a subscription-based approach.



> ***Battery Manager Pro*** *enables fleets to focus on their core operations while we take care of managing the batteries. Our predictive approach ensures batteries are replaced only when needed, helping fleets reduce unexpected failures and total costs of ownership by maximizing their battery investment.*
