If you consider the complexity of Minecraft's survival gameplay, taking into account various mobs, limited food, and different biomes, it's clear that crafting an Enchanting Table isn't an easy feat. You'll need to carefully manage your tools and weapons due to their limited supply and durability. To top it off, each mob and block requires specific equipment to defeat or break them. Without the right potions and enchantments, life in Minecraft would be a struggle. In this guide, we'll help you navigate the world of enchantments and cover the basics, including crafting an Enchanting Table in both Java and Bedrock editions.To create an Enchanting Table, you'll need the following ingredients: two Books, four Diamonds, and four Obsidian Blocks. We'll walk you through the recipe and provide tips on obtaining each item. You can use the table below to jump between sections at your convenience.First, let's focus on obtaining the remaining two items. If you're lucky, you might find books in chests from villages, shipwrecks, or strongholds. Alternatively, you can craft them using a Crafting Table and some basic materials. To get started, you'll need to obtain leather by killing cows, mushrooms, horses, donkeys, mules, or llamas. You can also collect rabbit hides by killing rabbits and combining four of them on the Crafting Table.Next, you'll need to gather paper. This can be found in chests from shipwrecks, strongholds, or villages, but it's easier to make your own using sugar cane near water sources in the overworld. Simply place three sugar canes next to each other on any row of the crafting area to create paper.Finally, combine 3 papers and leather to create a book. Place papers in all cells of the first row and leather in the first column of the second row to craft your book.Now that you have your book, it's time to focus on obtaining obsidian blocks. This will require some preparation, so make sure to prioritize the rest of the ingredients before moving forward. You'll need four obsidian blocks to complete the Enchanting Table recipe.Let's get started! To prepare a bucket for crafting obsidian blocks, place 3 iron ingots in a v-shape position in the crafting area.To craft an Enchanting table in Minecraft, you'll need to prepare several essential items first, including a diamond pickaxe, a bucket, and lapis lazuli. The diamond pickaxe is necessary for mining obsidian blocks, which are required for the recipe. To create one, place three diamonds and two wooden sticks in a specific arrangement in your crafting area.Once you have your tools ready, find a source of lava and water. Collecting lava from a pool or a desert biome can be easier than finding water. Then, use your bucket to transport the collected lava to the water's edge. Repeat this process until you've gathered enough materials to craft an Enchanting table.With all the necessary ingredients in hand, simply place three obsidian blocks at the bottom of the crafting area and follow the pattern: one obsidian block in the middle cell of the center row, diamonds on either side, and a book in the top-middle slot. You'll now have successfully crafted an Enchanting table.To unlock its full potential, open the Enchanting table by right-clicking on it and add items to its slots accordingly. This will enable you to apply enchantments from lapis lazuli, which requires separate resource guide for easier access.Enchanting is the process of applying magical properties to items. To enchant an item, players must use an enchanting table with the desired ingredients, including one block of obsidian and a diamond. The player can then select from three randomized options, which determine the level and type of enchantment applied.The enchantment level influences the quantity and quality of the enchantments applied, with higher levels generally resulting in more powerful or higher-level enchantments. However, there is a significant random factor involved, so even a high-level enchantment may not guarantee maximum strength.To increase the enchantment level, players can place bookshelves next to the enchanting table while keeping one block of air between them. The number and placement of bookshelves determine access to higher-level enchantments, with a total of 15 bookshelves required for all available enchantments.Enchanting tables can be placed on ice, but they are not immune to destruction by certain mobs.When it comes to enchanting items excluding leads and horse armor, an anvil and enchanted book can be used instead. Placing a bookshelf next to an enchanting table with one block of air in between increases the maximum enchantment level. A total of 15 bookshelves are required to reach the maximum level of 30. For more information on enchantment mechanics, refer to the relevant section.Enchanting tables emit a light level of 7 and have a standard Galactic alphabet glyph animation flowing from bookshelves. The arcane glyphs and cryptic runes displayed in the interface are written in this alphabet, which is used as a simple substitution cipher. However, these glyphs cannot be seen if "particles" in video settings is set to "minimal". The cryptic runes displayed are randomly constructed from a list of words and are purely cosmetic, with no relation to the enchantments applied.Enchanting tables can be customized by naming them using an anvil or the /data command. They also have piston interactivity, producing different sounds when placed under note blocks and cannot be pushed or pulled by pistons.Enchantment Table Details1.015 Added a sound for enchanting an item in the enchantment table. 1.032 The block entity ID for the enchantment table has been changed from EnchantTable to enchanting_table. 1.073 "Enchantment Table" has been renamed to "Enchanting Table". Hoes can now be enchanted.1.084 Prior to The Flattening, the enchanting table's numeral ID was 116. 1.115 The texture of enchanting tables has been changed. 1.118 Enchanting tables are no longer transparent from the bottom. 1.121 The enchanting table's bottom texture has now been made identical to that of obsidian - previously it had a defined border.1.134 Enchanting tables now provide a light level of 7, to match Bedrock Edition. 1.137 A transparent block between enchanting table and bookshelves no longer invalidates bonuses. 1.140 Reverted the texture of lapis slot to the texture before 1.18-pre5, to make the consistency with smithing table.1.143 Enchantment tables can now be crafted in the stonecutter.1.146 Added enchantment tables to the Creative inventory. 1.149 Enchanting tables are now craftable in the crafting table, instead of the stonecutter.1.152 When Experimental Gameplay is enabled, tridents can now be enchanted.1.155 The texture of enchanting tables has been changed.1.158 Hoes can now be enchanted with Efficiency, Fortune and Silk Touch.1.161 Enchantment tables now emit a light level of 7, instead of 12.1.164 Added a sound for enchanting an item in the enchantment table. 1.167 Legacy Console Edition TU7CU1 1.0 Patch added enchanting tables. 1.170 1.22 Patch added enchanting to consumable lapis lazuli. Enchanting has been re-balanced.Enchanting Tables in Minecraft are Enchanted BlocksEnchanting tables have a blast resistance of 1200 and cannot be destroyed by TNT, but can still be mined with any pickaxe.They are midway between slabs and full blocks height-wise, making them suitable for use as a TNT cannon's range-amplifier.The enchantment table always opens its book toward the player, even when invisible. The enchantment screen includes several in-jokes from Notch's tweets, including phrases such as "Well Played Internets You Are Good".You can craft a set of essential tools and equipment for enchantment tables by following these steps:Create obsidian: Pour water into a four-block pit filled with lava, creating obsidian blocks.Mine four obsidian blocks with a diamond pickaxe to collect crafting materials.Find or craft a book: Kill cows or horses, cut down sugar cane reeds, and combine leather and paper to make a book.Craft an enchantment table: Use diamonds and obsidian to create the top row, then select the recipe or combine items on the PC advanced crafting system.Place the enchantment table: Position it in a room with at least two blocks of space on three sides.Optional: Craft bookshelves using books, planks, and placing them above the table for better enchantments.Use the enchantment table to open the interface and select an item to enchant.The enchantment process can be thrilling, with a chance to add extra, randomly selected enchantments. However, once you've chosen an option, you can't reset without enchanting something else. Blocking bookshelves will reveal lower-level options. Different items have different available enchantments.Understand the cost: There are always three options on the table. The top one is weakest and costs one lapis lazuli and one experience level. The middle one costs two of each, while the bottom one requires three of each. The number next to each option indicates the enchantment's level. You must be at least that level to choose it.Enchantments can significantly impact mining time for obsidian. Without enchanting your pickaxe, an unenchanted diamond pickaxe takes 9.4s, while Efficiency I takes 7.25s, Efficiency II takes 5.55s, and so on. Haste effects from a beacon further decrease the time.For optimal enchantments, consider Unbreaking II for a never-breaking pickaxe or Efficiency V for faster mining. To mine obsidian, use a diamond pickaxe while avoiding lava.Note that golden swords are ideal for better enchantments, allowing you to transfer enchants to other swords. However, hoes can't be enchanted on tables but can be enchanted on an anvil with an enchanted book. For water breathing, increase the time to 8 minutes using redstone dust.This article was co-authored by Zac Churchill, a Minecraft Specialist. He has extensive knowledge of how to play Minecraft and its various versions, specifically in survival worlds, large builds, and server design.This content can be freely used in any format or medium, even commercially, and shared with others, also commercially.
