DECISIONFOCUS

SOLUTION BRIEF

AI across Decision Focus

Built into the platform you already use. Intelligence that works across all of your GRC.

DECISIONFOCUS

AI that does the groundwork, so your people can focus on decisions

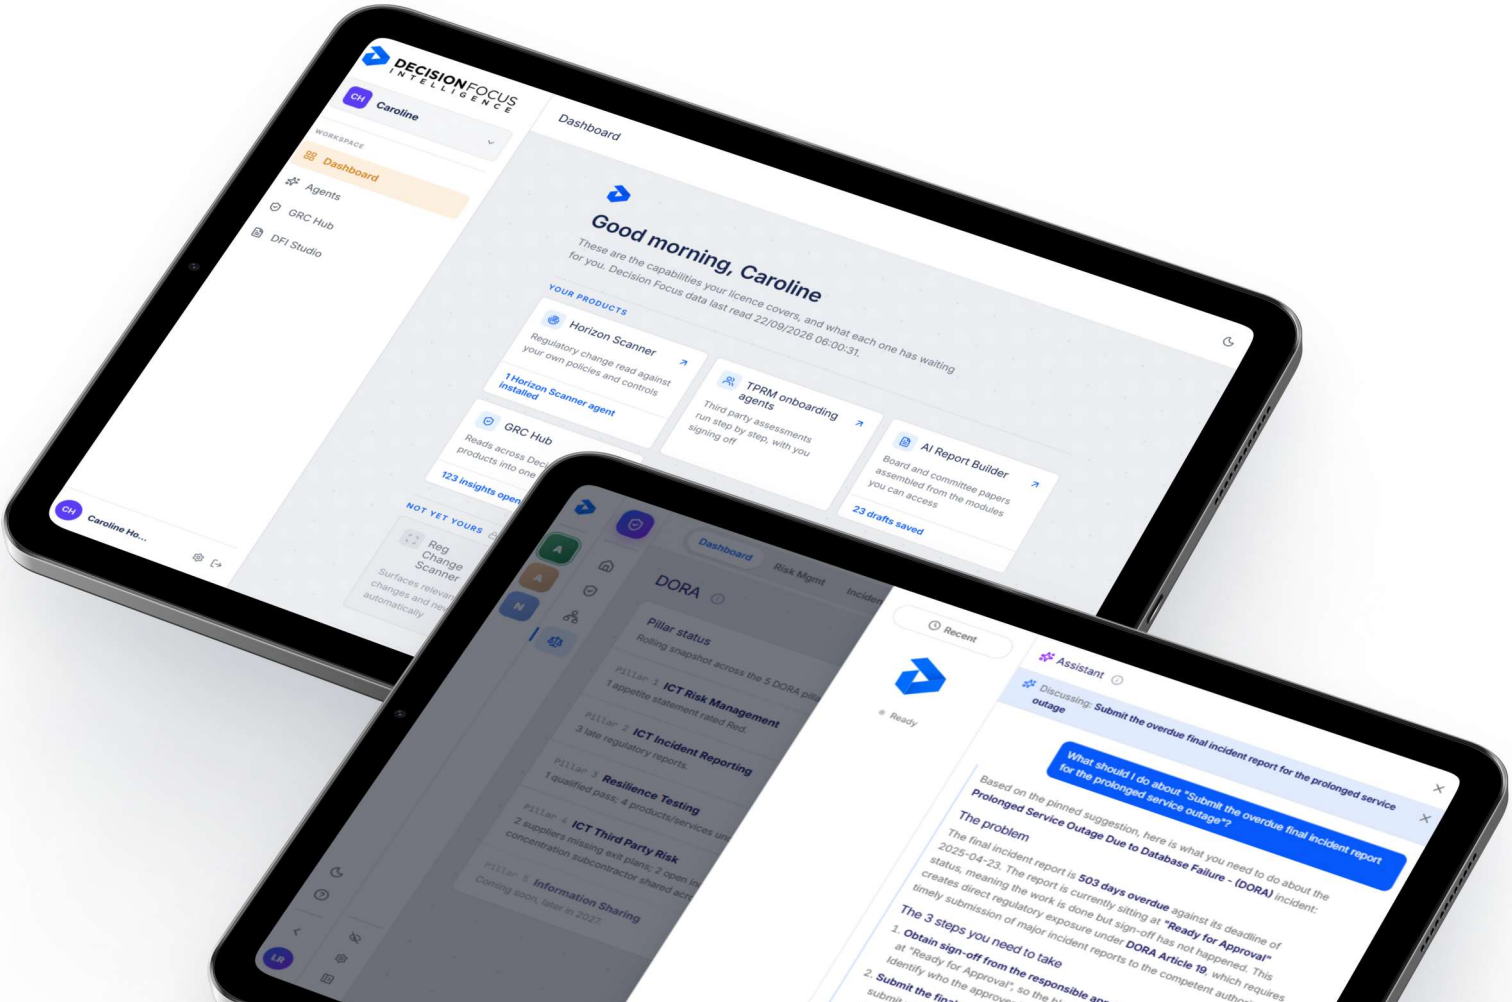
Take manual effort out of GRC, see your data as a connected whole and act on change sooner, without handing decisions to a machine.

DECISIONFOCUS INTELLIGENCE

GRC Hub, AI companion and agents

DECISIONFOCUS

AI features built into 20+ configurable GRC modules



Delivering business benefits

AI BENEFITS

Less manual effort

Summarise, link and complete records in a fraction of the time, so teams spend more of their day on judgement.

Ahead of change

Spot potential regulatory change early and see where it could touch your policies, risks and controls.

One connected view

See risk, control, audit and third party data together, framed for the stakeholders who need it.

Cleaner GRC data

Find duplicates and missing links, and keep new records within your approved fields and values.

Consistent, explainable assessments

Suggestions use your own rating scales and control library, and always show their reasoning.

People stay in control

AI suggests and your teams decide. Nothing is written back to your records without a person approving it.

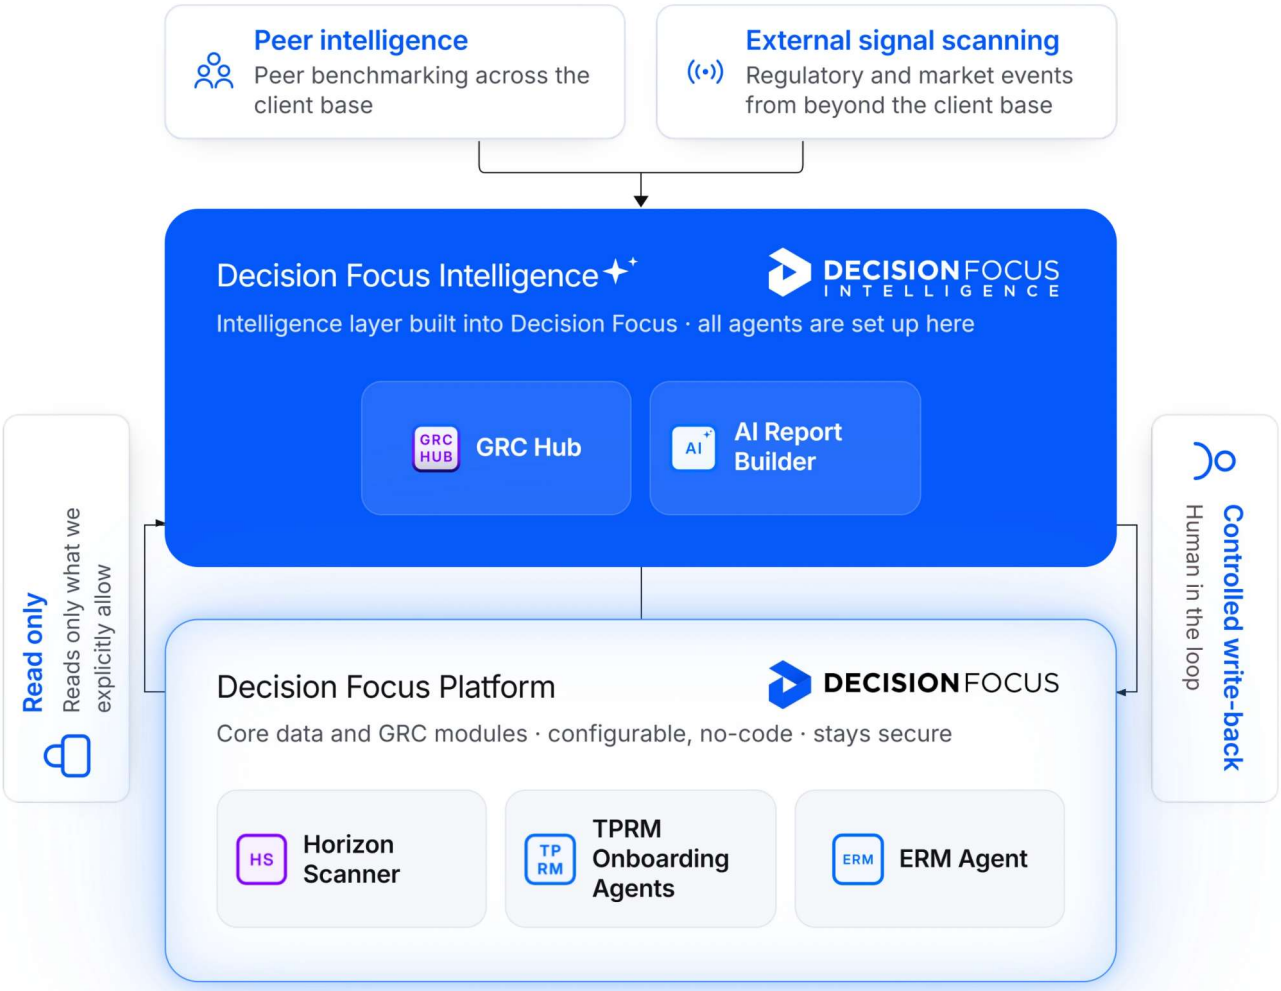
HOW OUR AI FITS TOGETHER

Two layers of AI, one connected view of your GRC

Decision Focus Platform holds your core data and GRC modules. AI features sit inside the modules your teams use every day, and our agents work alongside them.

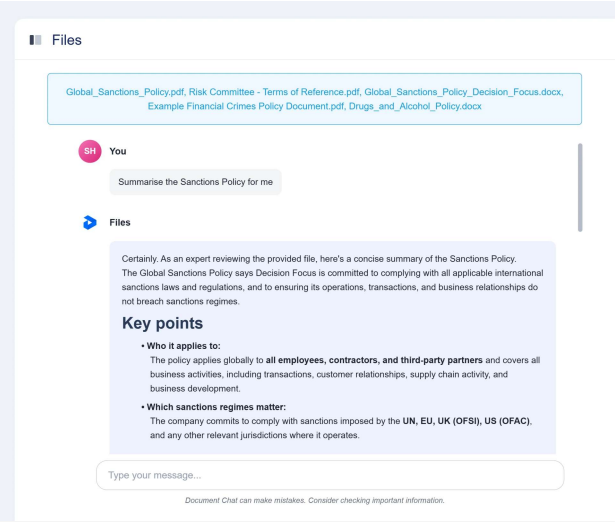
Decision Focus Intelligence is the intelligence layer built above Decision Focus Platform. It brings together your own data and external signals, and it is where every agent is set up. Peer intelligence, drawing on insight shared across our client base, is in development.

It reads only what you explicitly allow, and anything written back to the platform goes through a person first.



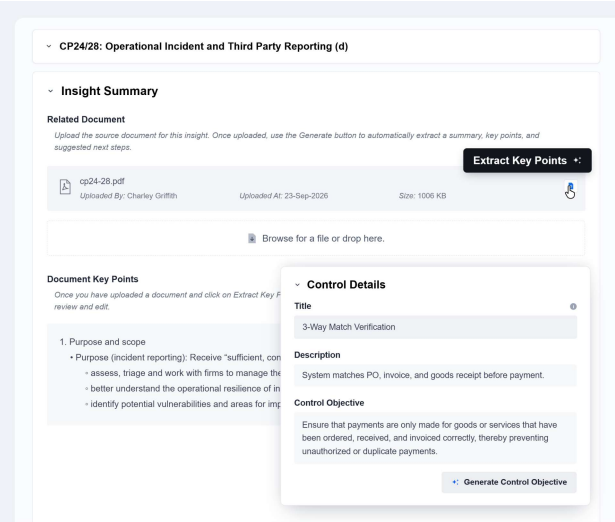
AI built into the modules you use every day

Available inside your configured modules, working within your approved fields, rating scales and dropdown values. Every suggestion can be accepted, edited or rejected.



Chat with documents

Ask questions of policies, documents and Office 365 files, and pull key obligations into your records.

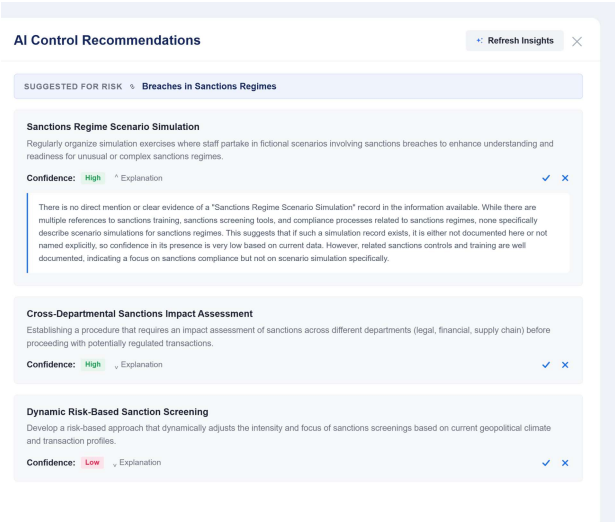


AI summaries

Turn long fields and documents into concise overviews your committees can read in minutes.

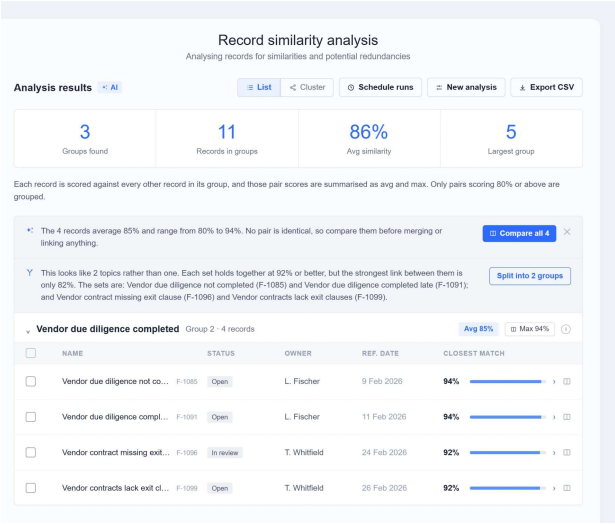
Suggested risks and controls

Suggests risks and controls your register may be missing, each with a rationale and a defined confidence level.



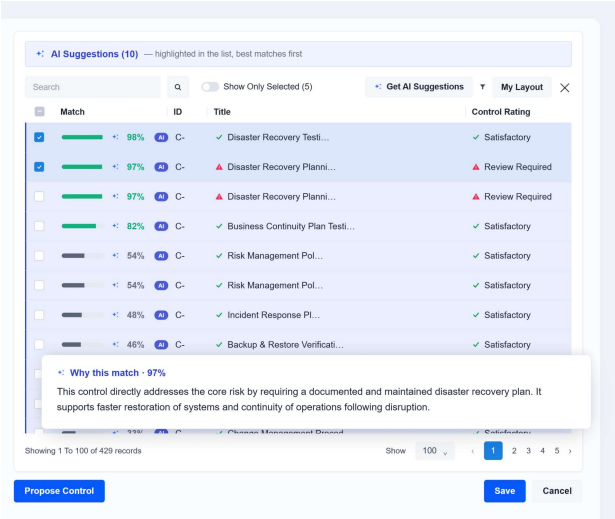
Similarity analysis

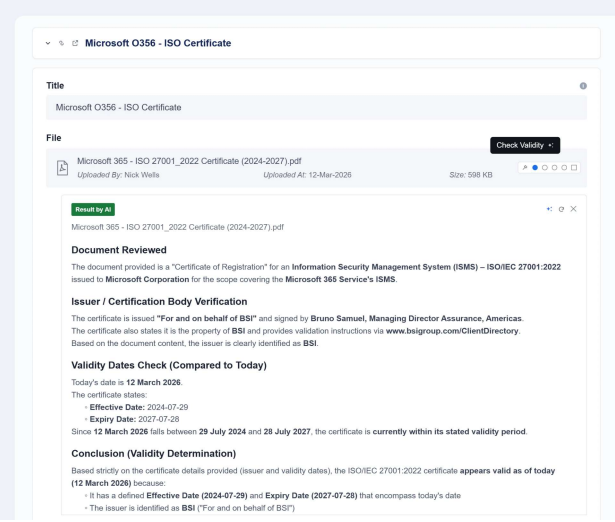
Finds likely duplicate records so you can merge, keep or remove them and keep your data clean.



Suggested links

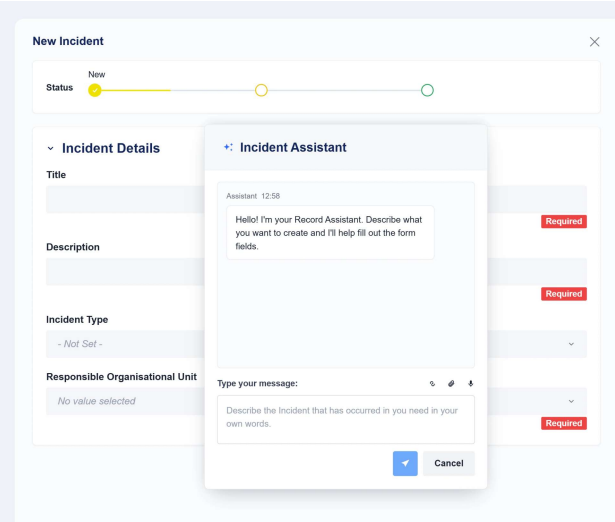
Proposes links between related records, strengthening the connections behind your reporting.





Document and certificate checks

Reads uploaded documents such as certificates and SOC 2 reports, provides targeted analysis and flags gaps, expiry dates or missing evidence.



Record assistant

Drafts new records from a prompt or an uploaded file, completing only approved fields and values.

Data visualisers

Describe the chart you need in plain language and export it or report on it in the platform.

Feature availability depends on your configuration

Intelligence that works in three ways

It watches outside, bringing in regulatory and external change before you have to go looking for it. It connects, giving you one view across the modules you already run. And it goes focused, working deep inside a single process to take the manual effort out of it.

1 EXTERNAL

Watching outside

HS

Horizon Scanner

An AI agent watches your sources for potential regulatory change, such as speeches and consultation papers, surfaces only what affects you and drops ready to action insights straight into Decision Focus.

2 CONNECTED

Seeing across modules

GRC HUB

GRC Hub and its AI companion

Reads your live data across your Decision Focus modules and frames it through the lenses different stakeholders need, with an AI companion to help interpret what each lens shows.

Integrated Assurance lens | DORA lens

3 FOCUSED

Going deep inside one process

AI

TPRM Onboarding Agents

Four AI agents work through the routine steps of third party onboarding end to end, while your analysts stay accountable for every decision that matters.

RCSA Challenge Agent

Reviews residual risk ratings against your controls and evidence and offers a reasoned challenge for risk owners to consider.

AI Report Builder

Builds reports on your GRC data from a written brief. Delivered with our consultants and Decision Focus Academy graduates at launch.

These are the highlights of what Decision Focus Intelligence can do today. We are developing new agents and capabilities all the time.

HOW WE APPROACH AI

Configured to you, controlled by you

Every AI feature and agent is given the context of your organisation: your sector, the jurisdictions you operate in, your regulators and the regulation you are subject to, and your risk appetite.

That context is applied consistently across every use case, so suggestions speak your risk language rather than a generic one.

1 ## People decide

AI suggests. Your teams accept, edit or reject, and the decision stays with them.

2 ## Evidence first

Suggestions show their reasoning and the records they are based on.

3 ## Your data stays yours

You keep control of your data and how AI is used with it.

4 ## Works within your rules

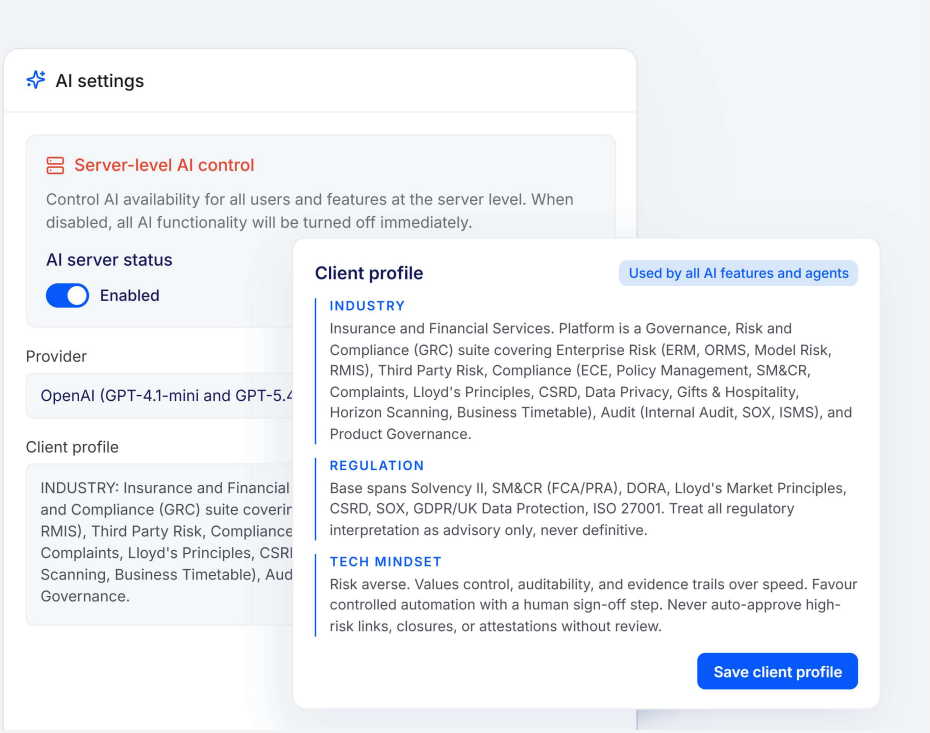
AI completes only approved fields and values, using your scales and libraries.

GOVERNING YOUR OWN AI?

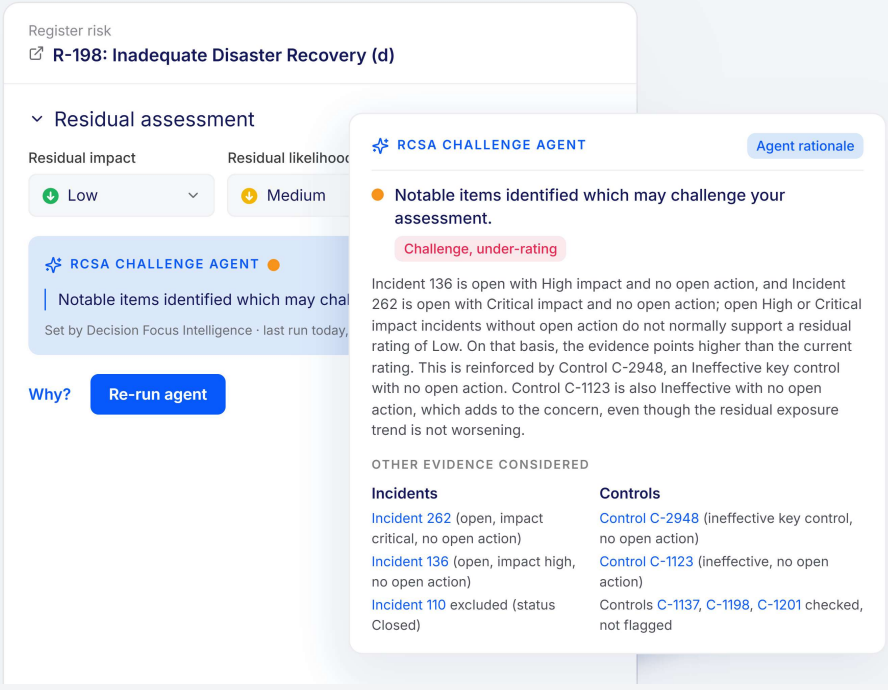
Our AI Governance module supports EU AI Act alignment, including fundamental rights impact assessments.

IN PRACTICE

Every suggestion shows its reasoning and the records behind it. Your risk owner makes the call.



↓ INFORMS EVERY SUGGESTION



BUILT BY GRC EXPERTS, FOR GRC EXPERTS

One platform for your GRC, with intelligence across it

Decision Focus is built, tested and implemented by GRC experts with decades of experience across industries. We know the challenges you face, the tools you need and how to deliver the results you want.

Decision Focus is an agile, no-code platform that allows organisations to create a tailored GRC solution from more than 20 configurable modules, spanning audit, risk, compliance, governance, regulatory reporting and more.

As a true 'Total GRC' platform, it brings all of your GRC processes into one unified system. At the centre is a focus on lean GRC, to help you eliminate inefficiencies and drive business growth.
