Extending Career Insights for Multilingual Mentoring using Power BI

Butterfly Data extended Multilingual Mentoring's bilingual Power BI dashboard with new interactive insights on careers and skills.

Challenge

Multilingual Mentoring collects learner survey data on attitudes to multilingualism, International Languages and future aspirations.

New survey questions meant the existing Welsh Learners dashboard needed new content on careers, skills and future opportunities. The new visualisations had to keep the dashboard's established look, feel and branding, work in both English and Welsh, and let users explore responses across years and learner groups.

Solution

Funded by Cardiff University's Future Generations Fund, Butterfly Data extended the dashboard with new survey data and interactive visualisations covering:

- Learners' post-GCSE pathways and university aspirations
- Careers advice and future career intentions
- Skills developed through different languages
- Perceptions of future career opportunities

The team added new pages, enhanced existing content and introduced filters for year and gender. Everything was delivered in English and Welsh, with translated labels, responses and supporting data logic, and the visuals were refined iteratively.

Impact

Multilingual Mentoring now has a more comprehensive and accessible way to explore learner perspectives on language learning, education and future careers, including comparisons of the skills learners associate with International Languages, Welsh and English.

The bilingual version supports accessibility and consistent communication with different audiences.
