Why These Matter

VISUAL INTELLIGENCE
09 NOVEMBER 2026

WORK / THE FIRST OPPORTUNITY

Who gets the first chance?

The first job pays for more than output. It gives a beginner somewhere to become capable.

THE SYSTEM BEHIND THE STORY

The work is visible. The learning is not.

A first assignment can produce two things at once.

01 **Immediate output**

Research, a draft, a checked result.

02 **Lasting capability**

Paid practice, feedback and growing responsibility.

03 **The employer's choice**

Remove the role, or redesign the route into expertise.

Automation changes the task. It need not erase the apprenticeship.

READ THE EVIDENCE CAREFULLY

A hiring warning. A learning opportunity.

19%

below a relative benchmark

US workers aged 22-25 in AI-exposed occupations, in Stanford's payroll sample through June 2026. Descriptive, not causal. [1]

+15%

issues resolved per hour

Average productivity gain with an assistant among 5,172 support agents at one firm. Not a forecast of wider hiring. [2]

These studies measure different populations and outcomes. They are not opposing bars in one labour-market forecast.

A PRACTICAL WAY FORWARD

Build a route, not a waiting room.

01 **Paid entry**

Make participation possible without private financial support.

02 **Supported practice**

Give real responsibility and a named, accountable reviewer.

03 **Demonstrated learning**

Check reasoning and growth, not only polished output.

THE QUESTION TO CARRY FORWARD

Before removing the first rung, show the new way up.

Entering a field?

Build one small piece of work you can explain and defend.

Managing a team?

Name what a junior role teaches and where that learning will go.

Leading an organisation?

Track novice hiring, progression and quality alongside output.

Use public or permitted material. Follow workplace rules for AI and protect confidential information.
