Seaman Corporation

Since 1949, Seaman Corporation has been a veteran-owned leader in engineered industrial coated fabrics, delivering high-performance solutions for mission-critical applications. With manufacturing facilities in Ohio, Tennessee, and Pennsylvania, the company proudly employs over 500 U.S.-based associates and serves geomembrane, military, architectural, commercial roofing and other industrial applications. Made in the USA and trusted worldwide, Seaman Corporation continues to expand its presence across global markets.

For more than 50 years, XR® Geomembranes, classified as Ethylene Interpolymer Alloy (EIA), have set the industry benchmark for strength, durability, and long-term stability. Engineered to perform in extreme and unpredictable environments, XR offers exceptional resistance to chemicals including acids, oils, methane, and alkalis. With a proven track record in demanding applications, XR technology delivers superior protection and long-term performance where it matters most.

Seaman Corporation partners with customers to provide world-class geosynthetic solutions that ensure unmatched protection, resilience, and confidence in every project.

Seaman is one of the early members of the Flexible Geomembrane Institute, after it expanded beyond the PGI and remains today a proud member of the FGI and its education and promotion of flexible and fabricated geomembranes. Seaman specializes in the R-EIA geomembrane products and technology. The FGI is very proud of its long term affiliation with Seaman.
