

FGI Member Spotlight

September 2026

Nestled in the San Juan Mountains of southwest Colorado, Simbeck & Associates has proudly called Mancos home since 1993. Surrounded by some of the most dramatic peaks in the Rocky Mountains and the unmatched beauty of the desert Southwest, it is a fitting location for a company dedicated to protecting the environment and preserving natural resources for future generations.

The Simbeck legacy in the geosynthetics industry began well before the company was founded. Our founders started working with and supplying geomembrane products in the 1970s, helping establish expertise that has now spanned more than five decades. Today, the second generation of the Simbeck family leads a team of between 30 and 40 dedicated employees who travel throughout the western United States, bringing more than 30 years of installation experience to projects of every size and complexity.

One of Simbeck & Associates' core strengths is its ability to install a wide range of geomembranes and geosynthetic materials. The company has extensive experience with HDPE, LLDPE, PVC, R-EIA, R-LLDPE, R-PE, R-PP, GCL's as well as numerous other specialty geomembranes, geosynthetics and geocomposite systems. Simbeck crews are fully trained and equipped to install both large factory-fabricated geomembrane panels and field-fabricated roll stock materials, ensuring efficient, high-quality installations across a variety of environmental, mining, solid waste, energy, municipal water, and specialty containment applications.

Today, the company is managed by John "Duff" Simbeck, Vice President, and Brendan Simbeck, Operations Manager. Simbeck & Associates has long been an active and respected member of the Fabricated Geomembrane Institute (FGI), with Duff Simbeck having served multiple terms on the FGI Board of Directors. The FGI is proud to recognize Simbeck & Associates as a valued long-term member and a trusted leader in the geosynthetics industry.
