

DRINKING WATER PROBLEM CORRECTED

Customers of the Pulaski Water System were notified on December 15, 2025, of a problem with the drinking water and were advised to boil water before consumption. We are pleased to report that the issue has been corrected, and it is no longer necessary to boil water before consumption. We apologize for any inconvenience this may have caused and thank you for your patience.

Flush your water lines.

- Turn on the cold water tap at each faucet and let it run for at least two minutes.
- Begin with the faucet located at the highest point in your home or building, then move to lower levels one faucet at a time.
- Remove and clean any particles from faucet aerators. Aerators can typically be unscrewed by hand or with a wrench. Rinse thoroughly and reinstall.
- Replace the filter cartridge in your refrigerator or ice maker. Discard all existing ice and flush the water dispenser for 3 to 5 minutes. Run the ice maker for one hour and discard any ice produced during that time. Wash the ice bin before reusing.
- It is not necessary to drain or empty your hot water heater.

As always, you may contact City of Pulaski Water System at 931-363-1730 or 203 South First Street with any comments or questions.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

The Pulaski Water System issued this notice.
