The screenshot shows a web browser window displaying a Microsoft support page. The page title is "Windows Has Detected a Malicious Virus On Your System" and the main heading is "Do Not Shutdown Or Restart Your Computer". The page also includes a "Contact Our Certified Windows Support Team For Immediate Assistance" button. A Windows Security warning dialog box is overlaid on the page, stating: "The server microsoftsupport.com-ptsrhelp18.us is asking for your user name and password. The server reports that it is from 0x80070424 Warning: Activation Key Damaged. Your System Has Been Compromised. Call Windows Support Immediately: 888-309-7921 (TOLL-FREE)." The dialog box also includes a warning: "Warning: Your user name and password will be sent using basic authentication on a connection that isn't secure." and a login form with fields for "User name", "Password", and a "Remember my credentials" checkbox. The page also features a "What's that charge?" section, a "See what your kids are up to" section, and a "Contact Our Certified Windows Support Team For Immediate Assistance" button. The page footer includes a "Protected mode is turned off for the Internet zone." message and a "Don't show this message again" button.

Updates and Fact Checks on Trump's Speech on Border Security

- President Trump's speech made the case for a border wall with Mexico, an issue that has forced a partial government shutdown.
- Here's what the president said, and how it stacks up against the facts.
- House Speaker Nancy Pelosi and Senator Chuck Schumer responded for the

FACT CHECK: THE PRESIDENT'S ADDRESS

Trump

"The wall will also be paid for, indirectly by the great new trade deal we have made with Mexico."

False

Company Update: Employee Action Required

IT Department

All,

We've been alerted of a potential breach of our company email server. At this time it doesn't appear that any sensitive information was compromised, but we need to take preventative measures to limit our risk.

If you haven't done so already please [click here to reset your email password](#).

We will keep you updated with any new information regarding this issue. If you have any questions please feel free to contact IT directly.

Thank you!

IT Department

Phishing

Social Engineering Red Flags

Phishing

FROM

- I don't recognize the sender's email address as someone I **ordinarily communicate with**.
- This email is from **someone outside my organization and it's not related to my job responsibilities**.
- This email was sent from **someone inside the organization** or from a customer, vendor, or partner and is **very unusual or out of character**.
- Is the sender's email address from a **suspicious domain** (like micorsoft-support.com)?
- I **don't know the sender personally** and they **were not vouched for** by someone I trust.
- I **don't have a business relationship** nor any past communications with the sender.
- This is an **unexpected or unusual email** with an **embedded hyperlink** or an **attachment** from someone I haven't communicated with recently.

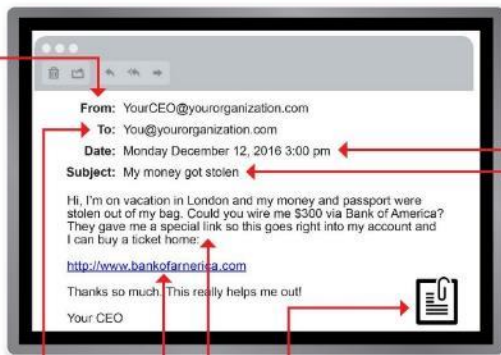

TO

- I was cc'd on an email sent to one or more people, but I **don't personally know** the other people it was sent to.
- I received an email that was also sent to an **unusual mix of people**. For instance, it might be sent to a random group of people at my organization whose last names start with the same letter, or a whole list of unrelated addresses.

HYPERLINKS

- I hover my mouse over a hyperlink that's displayed in the email message, but the **link-to address is for a different website**. (This is a **big red flag**.)
- I received an email that only has **long hyperlinks with no further information**, and the rest of the email is completely blank.
- I received an email with a **hyperlink that is a misspelling** of a known web site. For instance, www.bankofamerica.com — the "m" is really two characters — "r" and "n."

DATE

- Did I receive an email that I normally would get during regular business hours, but it was **sent at an unusual time** like 3 a.m.?

SUBJECT

- Did I get an email with a subject line that is **irrelevant** or **does not match** the message content?
- Is the email message a reply to something I **never sent or requested**?

ATTACHMENTS

- The sender included an email attachment that I **was not expecting** or that **makes no sense** in relation to the email message. (This sender doesn't ordinarily send me this type of attachment.)
- I see an attachment with a possibly **dangerous file type**. The only file type that is **always safe to click on** is a **.txt** file.

CONTENT

- Is the sender asking me to click on a link or open an attachment to **avoid a negative consequence** or to **gain something of value**?
- Is the email **out of the ordinary**, or does it have **bad grammar** or **spelling errors**?
- Is the sender asking me to click a link or open up an attachment that **seems odd** or **illogical**?
- Do I have an **uncomfortable gut feeling** about the sender's request to open an attachment or click a link?
- Is the email asking me to look at a **compromising or embarrassing picture** of myself or someone I know?

Cryptojacking

Steps

1. The threat actor compromises a website
2. Users connect to the compromised website and the cryptomining script executes
3. Users unknowingly start mining cryptocurrency on behalf of the threat actor
4. Upon successfully adding a new block to the blockchain, the threat actor receives a reward in cryptocurrency coins

A FUTURE OF FREEDOM AND PROSPERITY

Ron Paul served in the House of Representatives in from 1976 to 1977, from 1979 to 1985 and from 1997 until 2013. He ran for President in 1988, 2008 and 2012. His outspoken position against any legislation that would violate the Constitution earned him the nickname "Dr. No."

Ron Paul stood up for his opinions and tried to persuade his opponents. He never sold out and did not allow Washington DC to corrupt him. He serves as a shining example of how a politician and statesman should act and be. [Read more about Ron Paul.](#)

This website is maintained by independent grassroots supporters. It is not paid for, approved or endorsed by Ron Paul. Visit Ron Paul's websites, the [Ron Paul Institute](#) and the [Ron Paul Liberty Report](#).

Ransomware

Ransomware

1 INSTALLATION

After a victim's computer is infected, the crypto-ransomware installs itself, and sets keys in the Windows Registry to start automatically every time your computer boots up.

2 CONTACTING HEADQUARTERS

Before crypto-ransomware can attack you, it contacts a server operated by the criminal gang that owns it.

3 HANDSHAKE AND KEYS

The ransomware client and server identify each other through a carefully arranged "handshake," and the server generates two cryptographic keys. One key is kept on your computer, the second key is stored securely on the criminals' server.

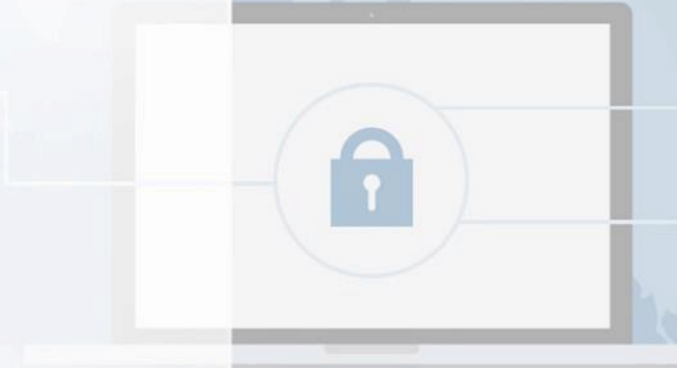

4 ENCRYPTION

With the cryptographic keys established, the ransomware on your computer starts encrypting every file it finds with any of dozens of common file extensions, from Microsoft Office documents to .JPG images and more.

5 EXTORTION

The ransomware displays a screen giving you a time limit to pay up before the criminals destroy the key to decrypt your files. The typical price, \$300 to \$500, must be paid in untraceable bitcoins or other electronic payments.
