OpenAPI 3.0

Documentation

XYZ+

API key management portal

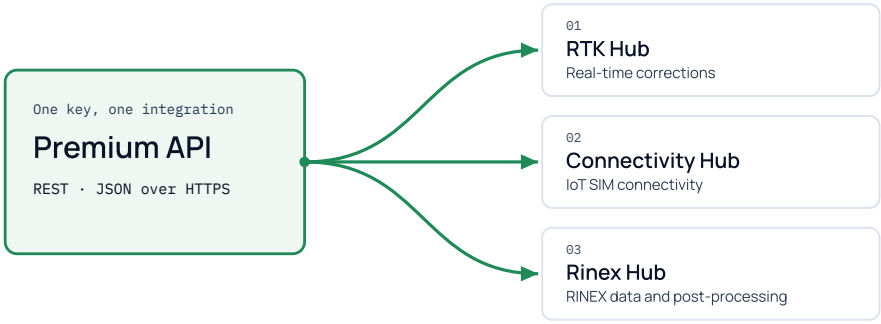
01 Overview

Resellers and OEMs connect their own systems directly to Premium Positioning.

- Devices and subscriptions are provisioned end to end, with no manual step in the portal: a single reseller key acts on every client account.
- Build our correction sources into your own ecosystem.

02 How it works

A single integration with the Premium API reaches all three Premium Positioning hubs.



03 Applications

OEM firmware Devices activate their subscription from their own firmware.	**Reseller back office** Resellers create clients and subscriptions from their own systems.
Fleet provisioning Operators configure whole fleets without the portal.	**ERP, CRM and billing** Business systems read subscriptions and credit balances.

04 Specifications

Base URL	api.premium-positioning.com
Environments	Sandbox environment and production environment
Access	Via our dedicated portal
