

FILM DEVELOPING SERVICES

We offer two levels of service. Our Pro Lab offers dip and dunk* processing for the best quality developing with prints done on Fuji Crystal Archive II Paper. Our Value Lab offers machine processing and printing for a more budget-friendly option. Both services require us to ship the film back and forth. All film shipped is expertly packed and sent via UPS Ground with tracking.

Pro Lab

- Film developed in Refrema dip & dunk machine
- 35mm, 120/220, 4x5/8x10 sheet film
- Push/Pull is available from 2- stops to +2 stops
- Cross Processing available at no additional charge
- Prints are done on Fuji Crystal Archive Type II Paper in glossy or matte
- Scans available in Low Res (4.5mb) or High Res (18mb)
- All processors run with full battery backup to ensure uninterrupted processing even during power failures

Value Lab

- Film is processed using a Noritsu machine
- 35mm only
- Prints are available in glossy or matte
- Only Standard Resolution scans are available at time of processing

*Dip and dunk film processing is a method of developing film where the film is dipped into or "dunked" into chemical baths for processing. It's known for producing high-quality color and black and white negatives, and is particularly favored for its scratch-free processing due to the film not coming into contact with rollers.

VALUE LAB PRICE LIST
