enterprise analytics

AI-Powered Document Intelligence Across IFS

DocuMate by E-Analytics

Built for IFS. Embedded in IFS. Automating Business Documents From Capture to Outcome.

- Supports IFS Cloud & IFS Applications 10

What is DocuMate?

DocuMate is an AI-powered document intelligence and automation platform built for IFS and delivered within IFS Applications. It reads, validates and converts business documents into structured, IFS-ready transactions and workflows.

Designed for both IFS Cloud and IFS Applications 10, it helps organisations reduce manual effort, improve accuracy and accelerate document-driven processes, without adding another disconnected platform.

Most capture tools extract data. DocuMate carries it through to IFS outcomes.

Manual document processing consumes time, increases the risk of errors and adds cost. Traditional capture solutions often add complexity by operating outside the ERP, creating additional integration, maintenance and vendor overhead.

The challenge

- Invoices, orders and contracts keyed in by hand
- Capture tools running outside the ERP
- Extra integration and vendor management
- A fragmented user experience

What it costs you

- Slow, labour-intensive processing
- Higher risk of data entry errors
- Limited visibility and auditability
- Ongoing maintenance overhead

The DocuMate difference

Native to IFS

Designed, deployed and delivered within IFS Cloud and IFS Applications 10.

Carries data to IFS outcomes

Validated, IFS-ready transactions and workflows, not raw extracted data.

No extra standalone platform to license, patch and maintain.

Plug-and-play

How DocuMate automates document flows in IFS

ONE PLATFORM. BUSINESS DOCUMENTS BECOME IFS OUTCOMES.

Supplier invoices · AP automation
PROVEN No manual keying.

Supplier e-invoicing support
Supplier e-invoice data into IFS-ready AP transactions.

Customer order creation
Customer orders created straight in IFS.

Purchase order creation
Purchase orders created from documents.

Automated work orders
Work orders generated automatically.

Customer contract automation
Contracts become structured IFS records.

Sales quotations
Quotation data captured into IFS.

Supplier quotations
Supplier quotes captured into IFS.

Lease contracts
Lease data extracted and migrated.

Any document automation Extend the same extraction, validation and automation to any IFS document flow.

Why DocuMate matters

DocuMate vs generic extraction and AP automation tools

CAPABILITY	DocuMate · IFS-embedded — IFS Cloud & Apps 10	Generic extraction tools
IFS experience & access	Fully within IFS. No separate portal or third-party login.	Separate app, portal or login.
Review & processing	Review and update data in IFS, straight into the business process.	Validation often outside IFS first.
Multi-document files	Separates and processes several documents in one file.	Varies; may need extra setup.
Email & attachments	Handles multiple documents and attachments in one email.	May need extra workflows.
Supplier e-invoicing	Supports supplier-side e-invoicing flows and converts structured invoice data into IFS-ready AP transactions.	May require separate e-invoicing integration or disconnected processing.
Supporting documents	AI classifies them and returns them to IFS DocMan automatically.	Separate storage or manual attachment.
3-way matching	AI matches invoices with purchase orders and receipts in IFS.	Often rule-based or set up separately.
Anomaly detection	Validates bank account, tax number and registration number.	Often manual checks.
Multi-language	Multi-language document processing, including handwritten invoices.	Support varies or needs setup.
Intelligent dates	Reads 02/05/2026 as 2 May or 5 February using your regional rules.	Ambiguous dates often checked by hand.

PART 2 · ACCOUNTS PAYABLE

Built for real-world accounts payable.

Supplier invoices rarely arrive clean. DocuMate handles the messy reality of AP, then checks, matches and records everything inside IFS. The next pages show how, with real-world scenarios.

Multiple attachments, one email

Every invoice and supporting document in a single email is processed. **See p. 9 →**

Multiple documents, one file

Several invoices and documents in one attachment are split and processed.
See p. 9 →

Complex layouts & tax handling

Reads summaries, VAT tables and multiple tax codes to build accurate invoice lines.
See pp. 6–8 →

Multi-language & handwritten

Captures invoices in multiple languages, including handwritten invoices.
See p. 9 →

Anomaly detection

Validates bank account, tax number and business registration number.
See p. 10 →

3-way matching using AI

AI matches invoices with purchase orders and goods receipts. **See p. 10 →**

Native IFS document handling

Invoices and supporting documents are attached in IFS DocMan automatically.
See p. 10 →

Audit logs & analytics

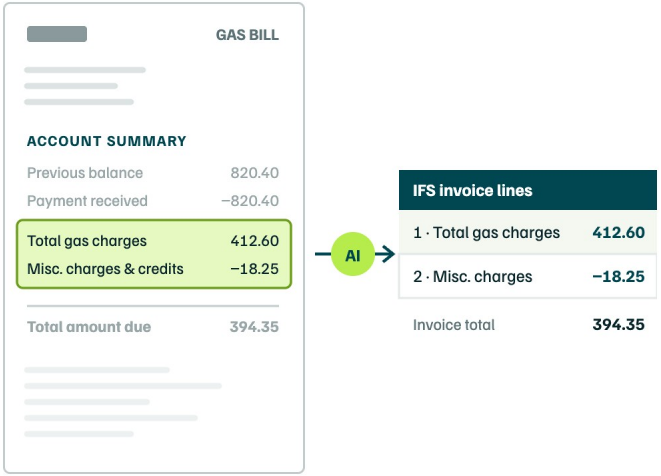
A full audit trail of every document, with analytics across processing.
See p. 10 →

Capture the totals, not the noise.

Utility, telecom and leasing invoices list dozens of charges. DocuMate captures only the totals you choose as invoice lines.

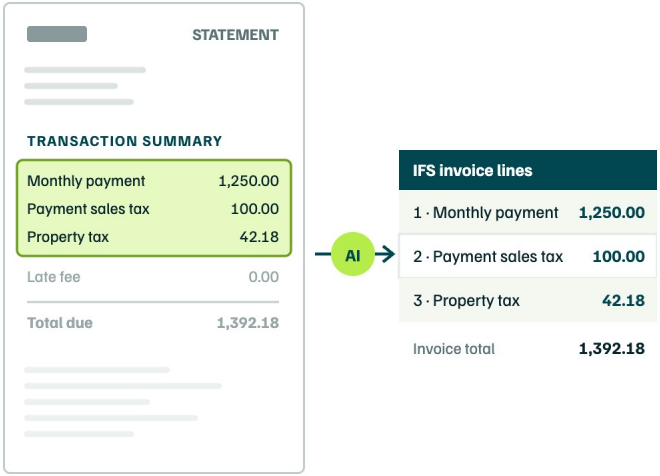
Utility bill: account summary

Only total gas charges and miscellaneous charges & credits become invoice lines.



Lease statement: transaction summary

Monthly payment, payment sales tax and property tax captured as separate lines.

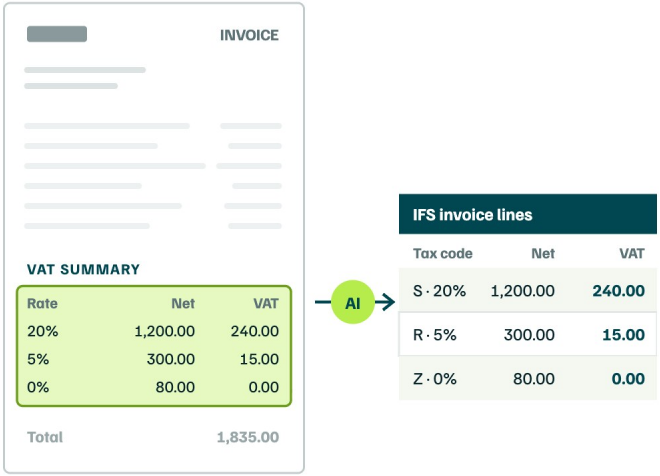


The right tax, on every line.

Tax is where manual keying goes wrong. DocuMate reads the tax tables and builds invoice lines with the correct tax codes and amounts.

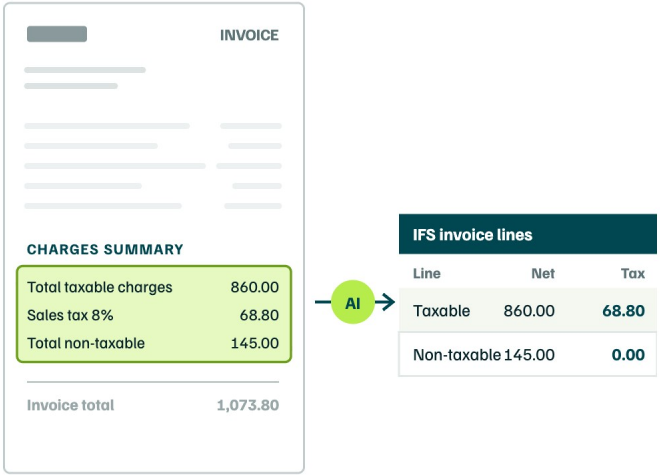
VAT summary with multiple tax codes

One invoice line per VAT rate, each with the correct tax code, net and VAT amount.



Taxable and non-taxable charges

Totals split by tax treatment, with the correct tax applied to each line.

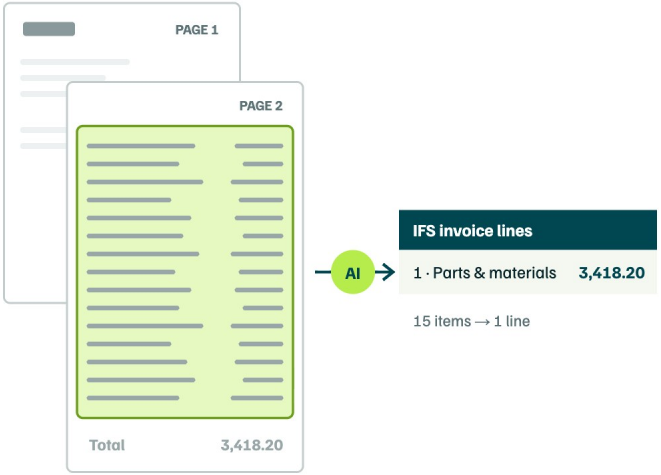


Line detail, at the level you need.

Line detail is often buried on later pages. DocuMate finds it on any page, splits it where it matters and summarises it where it doesn't. Freight on the last page lands on the right lines too.

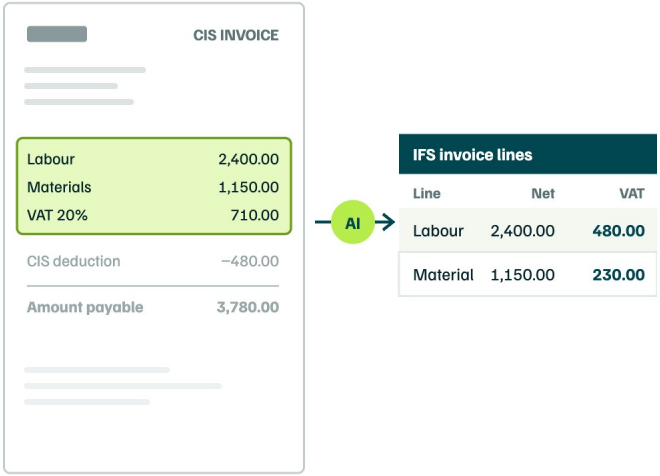
Page-two table, summarised

A long parts table on page two becomes a single invoice line, not one line per item.



CIS invoice: labour and material

Labour and material captured as separate lines, each with the right tax.

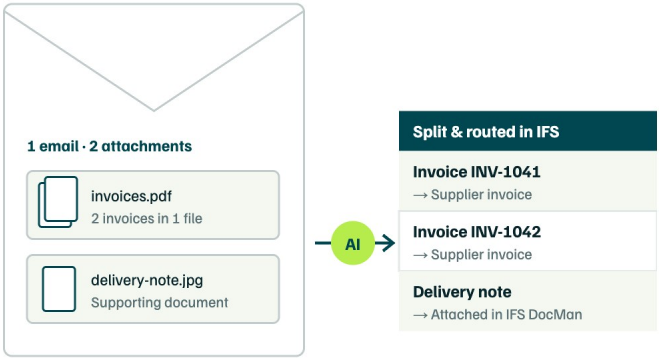


Real inboxes are messy. That's fine.

Bundled emails, combined PDFs, handwriting and foreign languages. DocuMate sorts it all out before anything reaches your AP team.

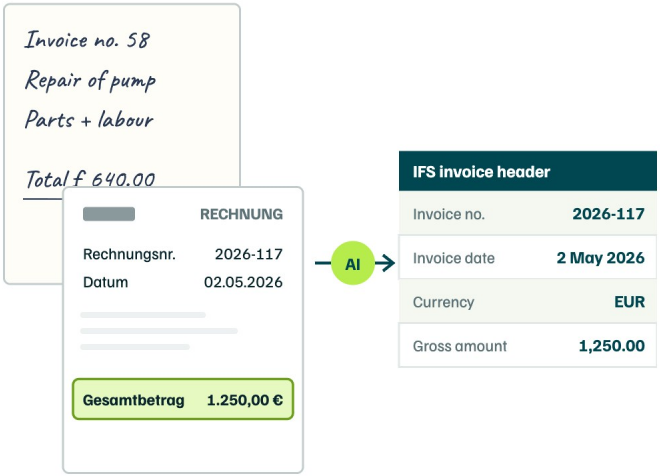
One email, many documents

Several attachments, or several invoices inside one PDF, are split, classified and routed.



Handwritten and multi-language

Handwritten invoices and invoices in other languages land in the same IFS fields.



Automation, without losing control.

Every invoice is checked against your IFS data, matched to its order and receipt, and fully traceable.

Anomaly detection

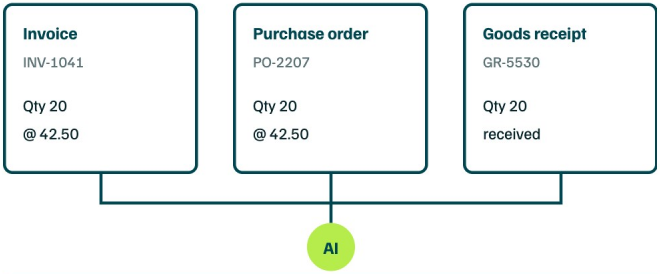
Bank account, tax number and business registration number are validated against the supplier record.

CHECK	ON INVOICE	IFS SUPPLIER	
Tax number	GB 284 1172 90	GB 284 1172 90	✓
Registration no.	08841275	08841275	✓
Bank account	•••• 7730	•••• 4821	!

Bank details changed · held for review

3-way matching using AI

Each invoice is matched with its purchase order and goods receipt before it is posted.



Native IFS document handling

Invoices and supporting documents attached in IFS DocMan, linked to the transaction.

Audit logs & analytics

A full audit trail of every document, with analytics across processing.

90%
Less manual effort

Weeks
To value, not months

1,000+
Invoices processed every month

Success speaks: Fragrance Oils

A leading UK fragrance manufacturer, Fragrance Oils chose DocuMate for its native IFS design and the deep IFS expertise of the team behind it.

"After evaluating several AP automation solutions, DocuMate was the clear choice. It's the only solution purpose-built for IFS by experts who truly understand the platform, making integration seamless.

The Enterprise Analytics team delivered a smooth implementation and empowered us to confidently manage the solution ourselves.

Since going live, we've processed more than 1,000 invoices, and DocuMate continues to deliver value with every enhancement."

Chris Edwards
Finance Director, Head of IT and Supply Chain, Fragrance Oils
