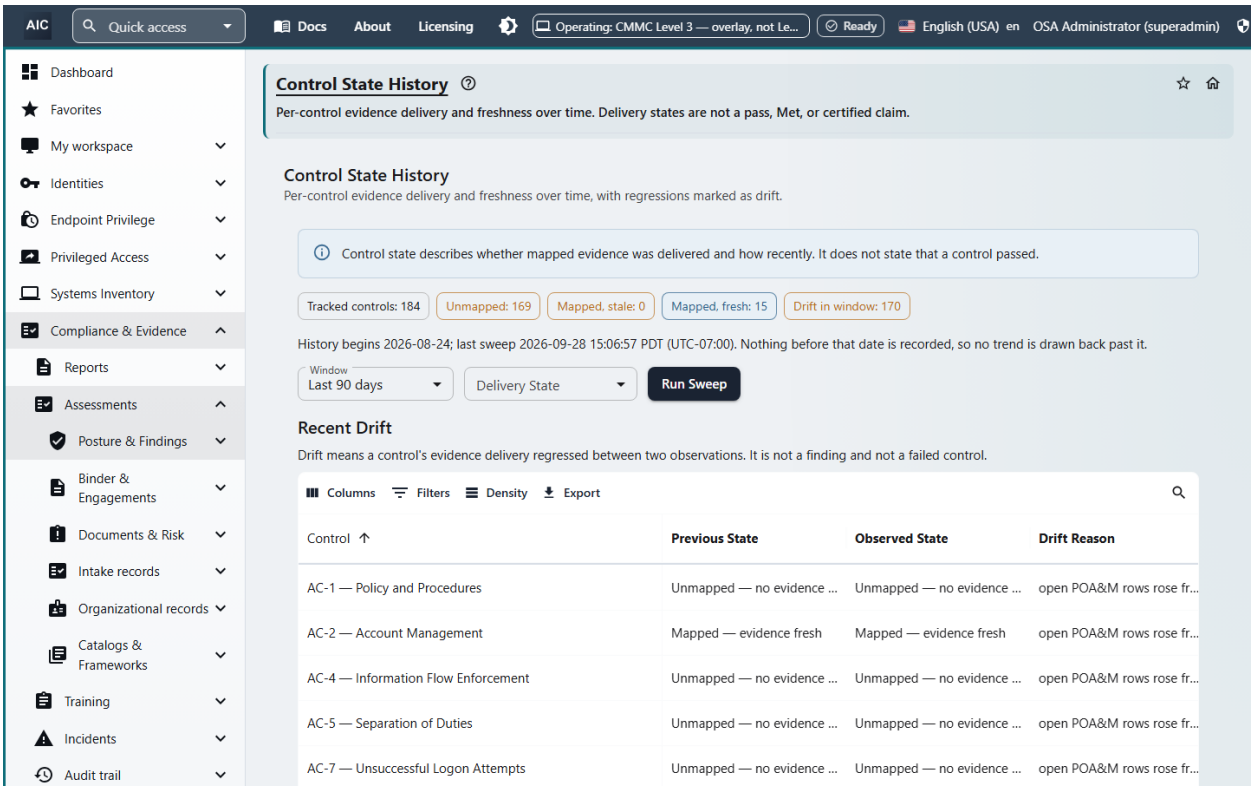
AIC Enterprise Privilege Suite™

A security review is easier to maintain when findings and evidence stay connected to daily operations. The **AIC Enterprise Privilege Suite™** collects activity, raises alerts, tracks corrective work, and retains the record for ongoing control review.



Control state history records drift over time, the core of **continuous compliance**.

Keep the Control Record Current

1. Observe the State

Use operational events and configuration checks to identify changes and findings on managed systems.

2. Act on the Finding

Apply supported repairs or assign the work to the responsible team, then rescan.

3. Retain the Evidence

Keep findings, state history, and supporting records available in the **Assessment Binder**.

Make Change Visible

Current State Compliance maintains a ledger of control findings. **Configuration Compliance** checks systems against approved baselines. Audit and event forwarding provide activity records to the destinations your organization configures.

Live external feeds require a connection. An air-gapped deployment uses the records and configured inputs available within its isolated environment.

Review the Evidence Together

The organization, its Managed Service Provider (MSP), and the assessor can work from the shared **Assessment Binder**. The assessor or regulator determines the assessment outcome.

Validate a Change Over Time

Use a test system with an identified finding. Inspect its initial state, make the corrective change, rescan, and compare the resulting state history and evidence.

See Ongoing Control Review in Action

Bring a control and the operational records your team needs to maintain.

Auditor and Readiness Resources

Security operations should produce compliance evidence continuously. C3PAO Partners and Auditor Resources shows how assessment teams can review current state, history, and supporting records.
