What's New in R:BASE 11 (Version 11.0)

UPDATE 4

Official Release Version

Build: 11.0.4.11119

Thursday, November 19, 2026

Requested Enhancements 09/07/2026 - 11/19/2026

Item	Date Implemented	Description
		Release Build: 11.0.4.11119
01.	11/17/2026	Database Explorer - When using Find in Expressions (for Forms, Reports, and Labels) where there are search results, no default TXT/PDF file name is provided. Please implement a default file name for the TXT and PDF output options.
02.	09/22/2026	Settings - A new SORTCASE setting has been introduced which controls whether sorting should be done with case sensitivity on or off. When SORTCASE is ON, upper case letters appear first in sorting, as per their ASCII value.

Item	Date Fixed	Description
		Release Build: 11.0.4.11119
01.	11/17/2026	Forms - When saving a form which contains a menu bar as a variable form, the menu bar is not retained.
02.	11/17/2026	Database Explorer - When there are search results with several objects (forms/reports/labels) and the "Output" is saved as a Text or PDF file, the default file name incorrectly has the "selected object" in the TXT/PDF file name. The TXT/PDF output contains the search results for all of the listed objects, so using the one object in the default file name is confusing.
03.	11/17/2026	Database Explorer - When using Find in EEPs for reports, and saving the output to a TXT file or PDF file, the default file name provided misspells "EEPS" as "EEEPs".
04.	11/13/2026	Forms - When deleting a Menu Bar branch, a confirmation dialog show prompt the user the verify the deletion.
05.	11/13/2026	Forms - When a Menu Bar is defined for a form and a user wants to delete items in the higher tree branches, the item is not deleted. When trying to delete a separator "-" the menu item is also not deleted.
06.	11/10/2026	Trace Debugger - When saving errors from the Trace Debugger's Error List toolbar, the default file name incorrectly includes pipe characters, which are invalid for file names. The pipe should be automatically replaced with underscore characters.
07.	10/26/2026	ODBC - When using SQL queries with an R:BASE/Oterro DSN, memory leaks can occur.
08.	10/12/2026	Commands - Following a transaction ROLLBACK, an index corruption issue is encountered.
09.	10/09/2026	Data Designer - When any one of the key constraints (primary key, foreign key, or unique key) is defined in descending order the column is incorrectly enclosed in parenthesis when viewed in the Keys/Indexes area.
10.	10/06/2026	Commands - When recreating a database from an UNLOAD, a buffer error is encountered when the data is loaded back into the tables.
11.	10/02/2026	Commands - After a table is created, populated, and committed, an attempt to create a new temporary table with a primary key results in a resource not available error message.
12.	09/28/2026	Commands - An access violation may occur when querying data from a VARCHAR column, where a buffer is limited to the NOTE data type character limitation.
13.	09/28/2026	Commands - When loading temporary tables, replacing rows, and then performing a roll back the table row data is now invalid. AUTOCHK reports: The new location of a moved row is invalid. (1247).
14.	09/28/2026	ODBC - An ODBC attached table query with a SELECT UNION with a WHERE clause and LIMIT clause does not support an EXCEPT clause.
15.	09/22/2026	Commands - When loading and then replacing table rows, the "Cannot read the Before Image file" error is displayed when a roll back is attempted.
16.	09/21/2026	Commands - When table records are replaced within a transaction and then a roll back is attempted, a corrupted index warning appears.
17.	09/17/2026	Commands - The CheckCameraAccess parameter, to check camera accessibility, is not returning the expected True/False value.

Copyright © 1982-2026 R:BASE Technologies, Inc. All Rights Reserved.

18.	09/14/2026	Functions - When converting a BIGNUM value to CURRENCY using the CTXT and FLOAT functions a syntax error is displayed, even though the conversion works as expected. Example: SET VAR vCurrency CURRENCY = ($1 * (FLOAT(CTXT(.vBigNum)))))
19.	09/14/2026	Forms - When a LED Text Label object is defined on a form and the "Hide on Startup" setting is enabled/True, the control is incorrectly displayed when the form opens.
20.	09/10/2026	Utilities - When the Find in Files utility is launched and files are displayed in the list, the sorted "Date/Time Modified" results are not in the correct chronological order when the R:BASE session's TIME FORMAT is set to HHMM.
21.	09/03/2026	Commands - While building files via repeated VARCHAR appends with the WRITE command, corrupted content appears in the output.
22.	08/26/2026	Commands - When using the LIST INDEX command, the subsequent results after what is defined for the LINES setting does not follow the NAMEWIDTH value.
23.	08/25/2026	Commands - When specifying a column list for a primary key or unique key, the help states that the columns must be separated with a comma or the current delimiter. However, when a multi-column primary key or a multi-column unique key is unloaded from a table, the comma separating the columns is not included in the output. When a multi-column foreign key is unloaded, the columns are separated by a comma.
24.	08/25/2026	Commands - When using the LIST CONSTRAINT command, the "Table Name" column header name is used once for the table which contains the constraint, and again for the referenced table for the constraint.
25.	08/25/2026	Commands - When using the LIST PKEYS command, the "Table Name" column is incorrectly listed twice.
26.	08/24/2026	Commands - When a primary key or foreign key is defined with the descending sort direction in the Data Designer, the descending sort direction is lost when the table is unloaded and rebuilt, as the ALTER TABLE syntax does not retain the sort.
27.	08/21/2026	Database Explorer - When the "Find in Expressions" results is sent to the clipboard, the content is missing the "Search Text:" line, which is available within the "Find in Control Properties" and "Find in EEPs" results.
28.	08/17/2026	ODBC - When attaching a table with a BOOLEAN data type column an error is returned as the SATTACH assigns the column as an INTEGER data type.
29.	08/14/2026	Commands - When a RELOAD is performed and the new database name which is specified already exists, the error #500 displays as expected. However, beneath it "RELOAD operation is complete" is incorrectly returned.
30.	08/10/2026	Commands - When using the PRNSETUP INFO command, the Current Printer value is truncated to 32 characters.
31.	08/07/2026	Forms - When a note column in an Enhanced DB Grid is defined with a text ellipsis (End or Middle), the text no longer displays in the grid.
32.	08/04/2026	Forms - When a note column in an Enhanced DB Grid is defined with multi lines rows, the text does not wrap in the cell.
33.	07/28/2026	R:Compiler for R:BASE - When an existing project is open and the user selects "Save As" from the tool bar, the "File name:" field is blank. Please provide the existing project file name in the "File name:" field for the "Save As" dialog, so the user may easily alter the value for the newly saved project.
34.	07/20/2026	Commands - When using a DECLARE CURSOR loop based upon a view with a DISTINCT and function, the expected rows are not returned.

35.	06/26/2026	Error Messages - When using the SET VARIABLE command for a table lookup, the error message has been updated to notify the user if there is no database connected.
