Holden Pak.

Packaging Sample Guidelines

Explore our sampling options to find the right fit for your packaging project. Samples can help you evaluate materials, structures, and design details before production. The right option depends on what you need to assess.

01

Existing Samples (Most Choices)

Explore available finished pouches to assess material feel, bag structure, dimensions, and functionality.

Best for : *Material and structural evaluation*

02

Custom-Made Samples (Optional)

Custom samples can be produced as fully finished bags using your artwork and specified materials, with quantities of up to 100 units. Alternatively, press proofs are available at a lower cost, typically including 3–5 printed pieces, with the option of a handmade pouch. Basic paper mock-ups may also be considered for preliminary artwork evaluation.
Custom paper box samples are generally easier to produce and offer shorter turnaround times.

Sampling costs and lead times depend on project specifications.

Best for : *Evaluating finished appearance and construction*

Before Requesting Samples

To help us recommend a suitable option, please share your preferred pouch type, dimensions, material requirements, artwork availability, and what you would like to evaluate.

Sampling Costs & Availability

Existing samples are subject to availability. Custom samples require additional preparation and production work, with costs depending on the specifications and sampling method.

Contact our team to discuss suitable options before proceeding.
