**THANK YOU**  
for your participation!

## Aurora-Central City 115kV Transmission Line Project

Public Open House  
March 26, 2026

We hope that we were able to address all of your questions today. We value your time and appreciate the opportunity to introduce this important project.

Your feedback is valuable and will help us with routing the transmission line.

You can submit comments by:

- Speaking with a project team member
- Viewing a property and commenting at a GIS station
- Leaving a completed comment form at the meeting
- Mailing a completed comment form
- Completing an electronic comment form on the project website at: [nppd.com/Aurora-CentralCity](http://nppd.com/Aurora-CentralCity)
- Calling: 888-677-4312

We encourage you to visit the project website periodically for updates on the project. Also, the virtual open house will be available for viewing on the project website until Friday, April 10, 2026.

*We look forward to working with you!*

Aurora-Central City 115kV Transmission Line Project  
[nppd.com/Aurora-CentralCity](http://nppd.com/Aurora-CentralCity) • 888-677-4312

### Project Description

NPPD plans to build approximately 14 miles of 115,000-volt (115-kilovolt [kV]) transmission line to accommodate current and projected future loads and provide additional reliability and enhanced resiliency in the central Nebraska area.

### Purpose and Need

- Provides enhanced reliability and resiliency for NPPD customers
- Provides for a new transmission path in the central Nebraska area to serve the future projected loads in the area
- Addresses local area contingency events to support voltage levels at Aurora and from Central City – Silver Creek – Columbus
- Meets the projected reliability needs identified in the Southwest Power Pool Integrated Transmission Plan
- Aurora-Central City 115kV project is the most effective transmission alternative to meet the North American Electric Reliability Corporation (NERC) reliability standards in this area

### Routing and Public Involvement Process

NPPD uses a thorough and comprehensive public involvement process when siting new transmission lines. Routing a line requires balancing a variety of factors – from proximity to homes, towns, and community amenities to land use, environmental concerns, and construction challenges. When planning new transmission lines, we must consider the most suitable location for the line to be built. While the shortest, most direct path might seem best, that is not always the case. Public input plays a key role in this process.

Routes for a transmission project are typically developed over the course of multiple phases and are then narrowed down to a final route.

### Project Process and Schedule
