

Submersible Pump Repairs

At Emnor Mechanical Inc. we repair most brands of submersible pumps, including but not limited to Flygt, ABS, Sulzer, Grindex, Pumpex, Hidrostal, Fairbanks Morse, Gorman-Rupp, KSB, and Wemco. These pumps can be used in various industries such as waste water, water treatment, drainage, and mining.

We dismantle, clean, inspect, and assemble pumps to OEM procedures and standards. Prior to disassembly we check the condition of the motor windings using our in-house tester and check the moisture sensor readings for moisture. Any motor work required is completed by a CSA XP certified motor shop.

We manufacture various components in house such as case rings, impeller wear rings, sleeves, and shafts. Using our state of the art 3D CAD software and hardware we can reverse engineer any cast component as a cost and time effective alternative to ordering OEM parts. These capabilities and expertise combined with our in-house mechanical seal repair and manufacturing makes us a true one-stop repair facility for your submersible pump repair needs.
