Navigating Excess Complexity: Total Synthesis of Daphenylline

Brandon A. Wright, Alessio Regni, Nattawadee Chaisan, Richmond Sarpong*

J. Am. Chem. Soc. **2024**, *146,* 1813.

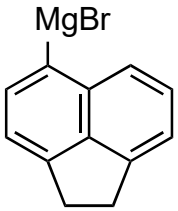

1-4

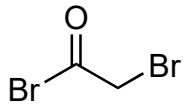

A

5-6

1) NaOMe, MeOH, 80 °C
2) **1**, CBz-Cl, THF, −5 °C
then 2 M HCl
3) Zn, AcOH, 40 °C
then Pd/C, H_2
4) **2**, K_3PO_4, CH_2Cl_2
then TsHNNHTs, TMG

1

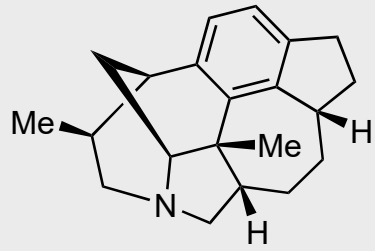

2

5) $Rh_2(OAc)_4$, 4 Å MS, CH_2Cl_2, 0 °C
6) 1,2-DCB, 250 °C, μW
then H_2, Pd/C, EtOAc
then Bu_4NBH_4

1) Reaction type? Draw a mechanism

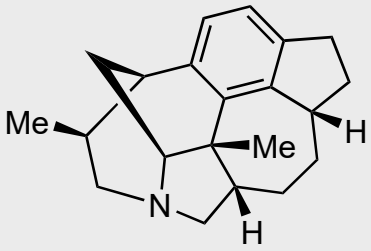

4) Draw a mechanism for the second half-reaction. What's TMG? Give an estimate for its pK_a

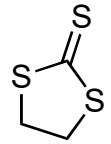

5&6) Name?
6) Propose a mechanism. *Hint:* two-step dearomatisation-rearomatisation

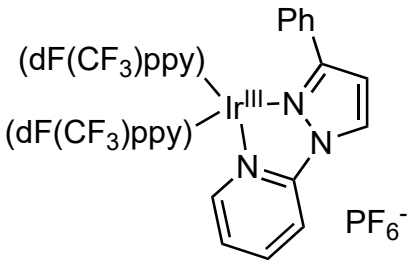

B

7-12

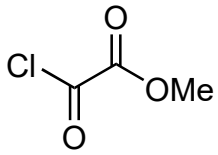

3

4

7) **3**, cat **4**, CH_2Cl_2, 400 nm LED
8) $LiAlH_4$, THF, 0 → 70 °C
then Ra-Ni, H_2O, 0 → 70 °C
9) CrO_3, H_2SO_4, H_2O/acetone
10) 48% HBr, 100 °C
11) **5**, DMAP, Et_3N, CH_2Cl_2
12) Bu_3SnH, AIBN, PhH, 80 °C

5

7) Name?
Hint: A four-membered heterocycle is formed.
8) Propose a mechanism.
