

## **Partnership with ALTUM and the European Union**

Buildit 5G Fund operates with support from ALTUM, working within an EU-co-funded initiative to strengthen early-stage innovation capacity in Latvia.

The cooperation enables us to mobilise additional capital for founders who build technologies that improve industrial performance, digital infrastructure, and sustainable development across Europe.

### **Our Investment Focus**

We invest in companies that:

- create tools and technologies for smart manufacturing, robotics, automation and connected devices,
- unlock value from industrial data and enable more efficient use of resources,
- demonstrate scalable business models with potential to become internationally competitive.

The aim is to support founders who combine engineering depth with a clear commercial direction, and whose products can meaningfully contribute to Europe's future competitiveness.

### **Role of ALTUM in the Initiative**

ALTUM's involvement provides:

- financial participation that expands the amount of capital available for early-stage investment,
- oversight ensuring that our activities follow the principles required for EU-backed financial instruments,
- a framework that encourages responsible governance, transparency, and long-term impact.

This partnership allows us to invest earlier, stay involved longer, and support teams as they progress from prototype to validated business.

### **How This Collaboration Strengthens the Ecosystem**

Through this cooperation, we aim to:

- improve access to risk capital for founders at the earliest stages,
- accelerate the development of technologies with strong export potential,
- encourage sustainable and data-driven industrial transformation,
- build a bridge between Latvian talent and international markets.

The overall goal is to grow a pipeline of companies capable of contributing to stronger, more resilient European industries.

### **Transparency & Public Communication**

In line with EU requirements, we ensure clear visibility of the programme by:

- presenting the EU emblem alongside the phrase "Funded by the European Union",
- acknowledging ALTUM's involvement in communications related to the initiative,
- sharing information about supported activities through our website and other channels.

This communication reflects our commitment to an open and responsible investment process.
