

# Associating a New Device With an Existing Vehicle

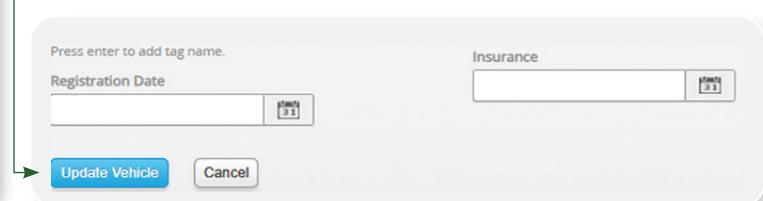

**Install the new 4G device (Any device with a part code):**

**DCM970 is a 4G device** in the vehicle, then go to the Admin/Vehicles tab and locate the vehicle that needs to be updated. Click on the Edit button (pencil icon) and choose the new device serial number from the drop down list under Device.

The screenshot shows the 'Edit Vehicle' page in the azuga Admin interface. The vehicle name is 'RR S60 4G Volvo', the VIN is 'YV1902FH3D2229311', and the device selected is '9120585121'. The 'Update Vehicle' button is at the bottom.

Next, **click on the Update Vehicle button** at the bottom of the edit page to save your changes.

The screenshot shows a confirmation dialog box with fields for 'Registration Date' and 'Insurance', and buttons for 'Update Vehicle' and 'Cancel'.
