FAQs

It doesn't matter if you have different Telematics Service Providers. We support Azuga, Samsara, GeoTab, Motiv, Lytx, Verizon Connect, Reveal, with more added to the list every day!

Identify opportunities to improve driver safety and earn better rates over time.

Your Risk Control Representative can provide periodic reports to help you interpret the Telematics data. Periodic safety meetings can also be conducted based on need. Of course, if you have a specific request, we can customize it for you.

Your data and credentials are stored securely using Amazon S3, which features both server-side and client-side encryption for uploads and storage.

We build insights to support your safety journey. Our Risk Control representatives work hand in hand to help you identify drivers in need of support and coaching while bringing easy-to-implement solutions to the table.

You get the data you need, with insights into the safety behaviors of all your drivers, including recent trends. You can see how you stack up against your competition by benchmarking your fleet to similar fleets, and your drivers to similar fleets' drivers.

We provide historical data up to the start of your policy. In most cases, the available data will be roughly 30 days prior to signing up with SafetyIQ. Smart Fleet will receive updated driver behavior data monthly to prepare your monthly report. This is an important feature as it allows a quick review of the past month and when needed a discussion about individual drivers.

GO FURTHER, FASTER
OUR IMPACT

Building comprehensive telematics programs is expensive and requires deep expertise.

"SafetyIQ helped unlock key insights on our mobility analytics project. We can develop compelling visualizations to interrogate our data and share the results."
lead engineer at global automaker
