Fleet + ELD

Complete solution for vehicle monitoring,
driver scoring, and HOS/DVIR reporting.

Azuga Fleet + ELD offers a comprehensive solution for fleet management, combining advanced tracking technology with electronic driver logs and DVIR reporting. Fully compliant with FMCSA regulations, this platform streamlines operations and ensures regulatory adherence.

Improve operations and reduce costs with real-time data and reports on vehicle location, routes, and speeds.

Let drivers capture HOS logs and DVIRs quickly and stay safe and in compliance.

Go paperless, streamline compliance, and improve resource allocation with data-driven analytics.

Azuga Fleet

Azuga Fleet is a comprehensive tracking system that leverages GPS, vehicle diagnostics, and driver incentives to optimize fleet operations. It prioritizes safety by monitoring driving behaviors, provides real-time visibility into fleet location and status, and offers diagnostic data for improved efficiency and cost reduction. The system also enables preventive maintenance through instant vehicle alerts, generates detailed reports for data-driven decision-making, and comes with a lifetime warranty and compatibility with various vehicle types.

Azuga ELD

Automated driver record keeping off all information required to keep you compliant with Hours of Service reporting. Key features include:

- **An easy-to-use graphical interface** makes it easy for drivers to log electronically.
- **A tablet that mounts inside the vehicle** and connects to the OBD-II tracking device.
- **Hours of Service (HOS) is automatically captured** eliminating manual entries.
- **Configurable alerts and notifications** to inform personnel of any issues (sent via email, or SMS).
- **Support for U.S. and Canada ELD and DVIR.**
- **Available in multiple languages** and support for Android and iOS.

Azuga ELD DVIR

A simple but effective process for paperless management of inspection reports compliant with FMCSA 396.11 and FMCSA 396.13 regulations.

- **Enhanced DVIRS:** Assists drivers with customizable pre-trip and post-trip DVIR points on per asset or class-of-asset basis.
- **Document Repairs:** Maintenance personnel use the web application to review defects and deficiencies, enter notes, and document repairs.
- **Review previous inspection:** When the driver takes the wheel, the mobile application retrieves the latest information for the vehicle and current trailers, creating a reviewable report. After reviewing the report, the driver checks one or more boxes to indicate satisfaction that the vehicle is in safe operating condition.
- **Seamless integration with the Electronic Driver Logs** workflow ensures that drivers record data at the proper times.
