

Intelligent IVI Software

Global Ecosystem Excellence for Automotive

Rich ecosystem applications with seamless integration, helping OEMs rapidly enter global markets while delivering outstanding user experiences.

Global Ecosystem Network

Years of industry experience combined with an excellent global partner network enable Telenav to provide OEMs with a rich portfolio of overseas ecosystem applications. Our extensive partnerships help manufacturers quickly select localized applications and rapidly enter international markets, ensuring end users receive outstanding experiences across diverse regions and markets.

Safety-First Design

Telenav IVI fully considers user safety by integrating OEM-related vehicle speed and gear interfaces to enforce in-motion restrictions on applications. This comprehensive approach safeguards driver attention and ensures that entertainment and information features are accessed appropriately, comprehensively protecting user driving safety at all times.

World-Class Design Excellence

Telenav features a globally leading design team that ensures OEM brand consistency while providing users with a smooth and aesthetically consistent experience. Our design philosophy balances brand identity with user-centric interface design.

Mobile Connectivity

Telenav IVI fully considers user safety by integrating OEM-related vehicle speed and gear interfaces to enforce in-motion restrictions on applications. This comprehensive approach safeguards driver attention and ensures that entertainment and information features are accessed appropriately, comprehensively protecting user driving safety at all times.

Deep Technical Expertise

The Telenav IVI team brings years of entertainment system development and overseas delivery experience, with comprehensive understanding of ecosystem application adaptation.

WE DELIVER

- › High-quality, efficient outputs

Ecosystem Applications

Online Music — Spotify

World's #1 music service by global subscriber market share

The most suitable music platform for global automotive deployment, Spotify provides coverage in 180+ countries and regions. Deeply integrated with vehicle hardware and software to deliver an automotive-grade customized entertainment experience that keeps drivers and passengers connected to their favorite music worldwide.

Additional Online Music Apps

Diverse music streaming options for global markets

Expanded music ecosystem including Anghami for Middle East markets, Napster for premium music streaming, Amazon Music for comprehensive catalog access, JOOX for Asian markets, and more applications continually being added to our portfolio.

Online Radio — myTuner Radio

Global coverage in 200+ countries and region

A global online radio application that supplements the regional limitations of traditional radio broadcasts. Provides access to radio stations and podcasts for diverse listening needs, ensuring drivers stay connected to local and international content regardless of location.

Additional Radio Apps

Extended radio streaming capabilities

TuneIn and additional radio streaming services provide comprehensive coverage of live radio, sports, news, and podcasts from around the world.

Online Meeting — Zoom

300 million average daily meeting participants globally

A global online radio application that supplements the regional limitations of traditional radio broadcasts. Provides access to radio stations and podcasts for diverse listening needs, ensuring drivers stay connected to local and international content regardless of location.

Online Weather

Globally-covered weather service

Utilizes OpenWeatherMap (OWM) service provider with over 4 million API users, delivering accurate and timely weather information worldwide to help drivers plan their journeys effectively.

Online News — NABD News

Middle East's largest aggregated news platform

Serving the MENA region with comprehensive coverage of global headlines, technology, finance, sports, automotive, and other multi-dimensional news briefs, keeping drivers informed and connected to current events.
