--" means the trap has not yet been deployed

." Means the trap was not serviceable (tipped over, missing, etc.)

"Week" refers to the annual, standardized calendar week number.

Grace samples are still pending.

The first alfalfa cutting in southeast Idaho has come and gone, and grain in some areas is 2 weeks away from harvest (a very early harvest). These factors may be driving aphid movement, so remain diligent with your weekly mineral oil applications (2 L per acre at the concentration recommended on the label).
