Responsibility

At Brdr. Krüger, sustainable product lifecycle considerations are at the heart of everything we do with focus on benefits for the environment, workers, and end-users. We source high-quality materials from certified sustainable forest management. The manufacturing processes run on low-emission hydropower and waste-to-energy solutions, achieving a near carbon-neutral effect and minimizing our reliance on fossil fuels. Our commitment to traditional craftsmanship and durable design ensures that our furniture is not only timeless but also built to last, contributing to sustainability for future generations.

Test and Certification

The wood is sourced from sustainably managed forests and certified by PEFC through independent third-party verification.

Meeting Regulations

The Clear Oil features a low VOC content and is fully compliant with EU regulations. This product contains no biocides, ensuring a natural and environmentally responsible finish. Worker safety is a high priority, with all processes conducted under controlled conditions in accordance with unions and national regulations.

Maintenance

Please see our Maintenance & Care instructions at

Gliders

Felt gliders installed as standard
Plastic gliders available upon request.

Variants

Available in custom-made options in various wood types, fabrics, and leather finishes to personalize the chair to suit your unique vision. From materials to finishes, the chair can be tailored to meet your needs.

Materials, Process and Finishing

Blending traditional craftsmanship with modern manufacturing, the design embodies Brdr. Krüger's dedication to timeless innovation and lasting quality. The chair features three signature components: steam-bent wooden arches that define the legs, circular forms that shape the upholstered seat and backrest, and elegant metal supports that enhance its distinct silhouette. Together, these elements create a piece that is both visually compelling while ensuring long-term durability and aesthetic relevance.

Fumed Oak Process

For a deeper tone, the oak undergoes a traditional fuming process, where it is exposed to a small amount of ammonia vapors in a sealed environment for 20 hours. This reaction with the wood's natural tannins enhances the grain structure and deepens the color. As a natural, non-surface-based treatment, no dyes are used, preserving the wood's authentic character. Variations in hue may occur depending on the tannin content of each piece.

Craftsmanship Statement

We support and foster the Danish cultural heritage of craftsmanship by preserving and advancing the traditional techniques nurtured in our family workshop since 1945. This commitment reflects both the preservation of the craft and its evolution through the integration of new techniques, innovation, and design development.

Description

The Arkade Chair balances expressive character with a refined, architectural presence. Its distinctive arched backrest and softened geometric lines reflect a modern take on Danish design heritage, offering both sculptural appeal and functional comfort.
