

Technical Summary

Part 1 : Dimensions

Width	136	mm
Length	1900 / 1820 / 1850 / 2100 (Specific length of board is dependent on the batch of timber available)	mm
Total Thickness	14.2	mm
Veneer Thickness	3.2 (Brushing effect may reduce total thickness in certain areas, making veneer between 2.0mm - 2.2mm)	mm
Boards Per Box	5	planks
Box Size	2.0128 or Other (Please confirm with batch in stock)	sqm

Part 2 : General Data

Origin of Timber Veneer	Australia
Janka Hardness	Spotted Gum: 11 (ATFA Classification: Very Hard) Blackbutt: 9.1 (ATFA Classification: Very Hard)
Structure	Australian Timber + Cross Bonded Ply Core (7 Layers)
Surface Lacquer	EverGuard™ Protection, developed with Teknos Treffert Parquet Lacquer, each board with 9 - 11 Coats, utilising 6 types of lacquer: <ul style="list-style-type: none"> ✦ UV PU Insulation Base Coat ✦ UV Transparent Sealer Base Coat ✦ UV Anti Scratch Sealer Base Coat ✦ UV Sealer Low Gloss Base Coat ✦ UV Super Matt Top Coat

Adhesive	Koyok International KOYOBOND®
Edging	Square Edge or Micro-Bevelled Edging
Finish	Light Brushed, Ultra-Matt
Installation Method	Floating Installation Strip Glue Installation Trowel Glue Installation
Slip Resistance (Wet)	P2 (Reported SRV 36) <i>Note: Result was P3, but classification was reduced to P2 because two results were less than the mean minus twenty percent.</i>
Box Weight	21kg (Approximate. Please confirm with the batch in stock.)
Installation Areas	Residential and Commercial

Part 3 : Installation

Floated on Underlay	Yes Suitable with all EverQuiet® Hard Floor Underlay . Please confirm suitability with other underlays with your installer or retailer. A plastic moisture barrier is required under all installations.
Trowel Glue	Yes (3 - 6mm V-notch trowel)
Strip Glue	Yes
Nailed	No
Underfloor Heating	Not Suitable Australian eucalyptus timbers are not recommended over underfloor heating, as they present a greater risk of surface "checking" with changes in temperature. If the customer proceeds to install over underfloor heating, we cannot provide a product warranty to the customer.

Part 4 : Timber Grading Specifications

Timber Grade	Standard
Moisture Content	9 - 11%
Colour Variation	Yes
Filled Defects	Yes
Sapwood	Yes
Heartwood	Yes
Pirth	None
Underfloor Heating	Yes, suitable with hydronic in-slab heating. Please refer to installation instructions.
Filler	Medium Black
Maximum Size of Knots	≈< 25mm Diameter
Gum Veins	Allowed
End Checks	Filled or Removed
Insect Damage	80% Removed, 20% Filled
Ingrown Bark	None

Part 5 : Warranty

General Residential (Structural)	25	Years
Light Commercial (Structural)	5	Years

Part 6: Fire Test

Definitions of Noise Metrics

FIIC: Field Impact Insulation Class is a single-number rating of how well a floor system attenuates impact type sounds, such as footsteps. Calculated from third-octave band normalised impact sound pressure level data and referenced to 10 m² as described in ASTM E989. The higher the single-number rating, the better its impact insulation performance.

L_{nT,w}: The Weighted Standardised Impact Sound Pressure Level when measured in situ referenced to a reverberation time (RT60) of 0.5 seconds. Used by the AAAC to determine their respective Star Rating.

CI: Spectrum adaption term is a low frequency correction factor. Typically for massive floors such as concrete, the values are about zero while for timber joist floors CI is positive because of the low resonant frequencies. Considers frequency range between 100- and 2500 Hz.

CI(50-2500): Same as above, but for the frequency range 50 -2500 Hz.

CI(125-2000): Same as above, but for the frequency range 125 -2000 Hz.

Definitions of Noise Metrics

FIIC: Field Impact Insulation Class is a single-number rating of how well a floor system attenuates impact type sounds, such as footsteps. Calculated from third-octave band normalised impact sound pressure level data and referenced to 10 m² as described in ASTM E989. The higher the single-number rating, the better its impact insulation performance.

L'nT,w: The Weighted Standardised Impact Sound Pressure Level when measured in situ referenced to a reverberation time (RT60) of 0.5 seconds. Used by the AAAC to determine their respective Star Rating.

CI: Spectrum adaption term is a low frequency correction factor. Typically for massive floors such as concrete, the values are about zero while for timber joist floors CI is positive because of the low resonant frequencies. Considers frequency range between 100- and 2500 Hz.

CI(50-2500): Same as above, but for the frequency range 50 -2500 Hz.

CI(125-2000): Same as above, but for the frequency range 125 -2000 Hz.

Definitions of Noise Metrics

FIIC:
Field Impact Insulation Class is a single-number rating of how well a floor system attenuates impact type sounds, such as footsteps. Calculated from third-octave band normalised impact sound pressure level data and referenced to 10 m² as described in ASTM E989. The higher the single-number rating, the better its impact insulation performance.

L'nT,w:
The Weighted Standardised Impact Sound Pressure Level when measured in situ referenced to a reverberation time (RT60) of 0.5 seconds. Used by the AAAC to determine their respective Star Rating.

CI:
Spectrum adaption term is a low frequency correction factor. Typically for massive floors such as concrete, the values are about zero while for timber joist floors CI is positive because of the low resonant frequencies. Considers frequency range between 100 -and 2500 Hz.

CI(50-2500):
Same as above, but for the frequency range 50 -2500 Hz.

CI(125-2000):
Same as above, but for the frequency range 125 -2000 Hz.

AAAC Star R.	2	3	4	5	6

Acoustic test results provided are only indicative of acoustic performance and are site specific, so outcomes may vary from building to building. Everfloor provides this information for guidance and indicative purposes only and does not guarantee any specific acoustic outcome. Indicative testing has been completed by acoustic engineers according to AS/NZS ISO 140.7:2006 and the rating has been determined as per AS ISO 717.2-2004.

Please visit everfloor.com.au for the most up-to-date version of Warranty, Installation, and care and maintenance guidelines. All technical data and testing are based on samples and are for indicative purposes only. Version: August 2025
