[#]This performance data pertains specifically to the Class A month-end unit prices expressed in Australian Dollars. Net return of the Fund has been calculated after the deduction of management fees and operating costs. Please note that these figures do not factor in the potential tax obligations at an individual investor level. This is historical performance data. The value of an investment can rise and fall and past performance is not indicative of future performance. All figures disclosed within this report are net of GST and RITC. Investors are reminded to seek independent financial advice before making investment decisions based on this performance data.

Underlying Fund Portfolio by Fair Value

1. As a percentage of Private Credit Investments. Excludes Liquid Investments. 2. Reflects fair value price of the Private Credit Investments weighted by the fair value of the Private Credit Investments. 3. Reflects current credit spread of the Private Credit Investments weighted by the fair value of the Private Credit Investments. 4. Reflects Last Twelve Months EBITDA of the Private Credit Investments weighted by the fair value of the Private Credit Investments. Figures are derived from the financial statements most recently obtained by Goldman Sachs Asset Management. 5. Calculated with respect to all Private Credit Investments. For a particular portfolio company, we calculate the level of contractual indebtedness net of cash ("net debt") owed by the portfolio company and compare that amount to measures of cash flow available to service the net debt. To calculate net debt, we include debt that is both senior and pari passu to the tranche of debt owned by the Underlying Fund but exclude debt that is contractually subordinated in ranking to the debt owned by the Fund. We believe this calculation method assists in describing the risk of the Fund's portfolio investments, as it takes into consideration contractual rights of repayment of the tranche of debt owned by the Fund relative to other senior and junior creditors of a portfolio company. We typically calculate cash flow available for debt service at a portfolio company by taking EBITDA for the trailing twelve-month period. Weighted average net debt to EBITDA is weighted based on the fair value of the Fund's applicable Private Credit Investments. 6. Net Asset Value is calculated as Fund assets less Fund liabilities. 7. Includes the Underlying Fund's management fee of 1.25% p.a. and is exclusive of the Underlying Fund's estimated expenses of 0.40% p.a. Although entitled to do so, the Fund does not currently charge a performance fee. For further information please refer to section 10 of the Product Disclosure Statement.

Fund Commentary

The Fund delivered a total return of 0.46% for the month.

The Underlying Fund return for September was largely driven by net investment income on the private credit and liquidity sleeve investments. Unrealised mark-to-market value changes in FX hedges and the public credit portfolio, partially offset net investment income, resulting in a negative impact of approximately 0.23%.

The Underlying Fund's largest deal completed in September was an investment in Aurora Energy Research, a leading UK-based provider of cloud-native power price forecasting and specialised advisory services to a global blue-chip customer base. The company has a dominant market position in Europe with a growing presence in North America and is expected to benefit from industry tailwinds such as the energy transition. The Goldman Sachs European Private Credit team supported TPG Capital's acquisition of Aurora Energy Research and was the lead lender on the transaction.
