

Environment Policy

Advanced Plastics prides itself on the responsible manner in which it conducts its business in relation to preventing any adverse environmental effects. We understand the necessity to implement an environmental policy and the consequences faced by ignoring these fundamental requirements. The measures we have taken include the following:

- A** All employees will be encouraged to keep waste to an absolute minimum – this includes waste of materials, packaging, power and cost.
- B** Wherever possible packaging for goods is to be re-used rather than discarded.
- C** Wherever possible sprues and rejected mouldings are to be reground and the material re-used on jobs where this does not affect conformity to customer requirements.
- D** Waste oil / chemicals are to be disposed of in a responsible manner. An outside contractor is used to remove and recycle waste oil. Under no circumstances are any chemicals /solvents to be disposed of into the drainage / sewerage systems.
- E** The chillers for the moulding machine cooling water are currently under the scrutiny of an outside sub-contractor who specialises in these systems. It is their responsibility to monitor this water system and to make adjustments to the chemicals levels as required. Only subcontractor personnel or correctly trained staff members may monitor and adjust the water system.(add Anti-Freeze) as required.
- F** Hazardous chemicals/solvents in use at Advanced Plastics are held in a secure store and only issued, when required, to experienced members of staff.
- G** Mixing instructions for material & masterbatches etc, are clearly detailed on the component specification sheet. Any mixing will be undertaken by a competent/ trained member of staff.
