

## Environmental Policy

Advanced Plastics (South) Ltd prides itself on the responsible manner in which it conducts its business in relation to preventing any adverse environmental effects. We understand the necessity to implement an environmental policy and the consequences faced by ignoring these fundamental requirements. The measures we have taken include the following:

- Actively encouraging customers to consider using recycled materials wherever possible.
- All employees will be encouraged to keep waste to an absolute minimum – this includes waste of materials, packaging, power and cost.
- Wherever possible packaging for goods is to be re-used rather than discarded.
- Wherever possible sprues and rejected mouldings are to be reground and the material re-used on products where this does not affect conformity to customer requirements.
- Waste oil/chemicals are to be disposed of in a responsible manner. An outside contractor is used to remove and recycle waste oil. Under no circumstances are any chemicals/solvents to be disposed of into the drainage/sewerage systems.
- The cooling tower for the moulding machines cooling water is currently under the scrutiny of an outside sub-contractor who specializes in these systems. It is their responsibility to monitor this water system and to adjust the chemical levels as required. The sub-contractor is also responsible for training nominated members of staff to monitor the system. Only sub-contractor personnel or correctly trained members of staff may monitor and adjust the water system.
- Hazardous chemical/solvents in use at Advanced Plastics (South) Ltd are held in a secure store and only issued, when required, to experienced members of staff.
- Mixing instructions for solvents, etc., are clearly detailed on the component specification sheet or secondary operations specification sheet. Any mixing will be undertaken or supervised by a senior member of staff.
