

Mobile Food Ordering

Enhance the on-site food and beverage experience for guests and operators by offering mobile food ordering through your Attractions.io app solution. This feature allows guests to order food, drinks, and snacks from anywhere, eliminating long lunchtime queues and providing a more efficient experience.

Ditch the queues

Eliminate wasted time spent waiting in line by sending guests automated notifications when their order is ready for collection. And, reduce pressure during ordering by allowing guests unlimited time to place their order.

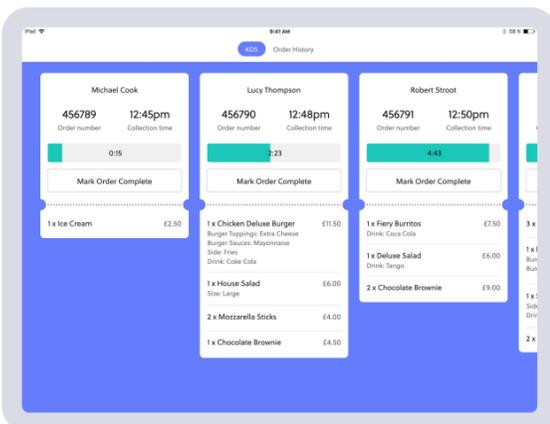

Order now, collect later

Empower guests to order meals, snacks, and drinks from any on-site outlet or directly to their table with table service, giving them control over when their order is prepared and enhancing their overall experience.

Increase revenue

Encourage guests to add to their basket by up-selling meal deals and cross-selling additional items, and remind guests to complete their order with in-app reminders that link back to their basket.

Our partner SSA's data says they saw a 68% higher average transaction on mobile ordering versus traditional point of sale (on 800k users). Our own research has shown an average of with an average of 1 in 6 abandoned orders recovered.
