Message from General Manager

Dear Valued Guests,

At Emerald Maldives, sustainability is central to our luxury experience. We protect the Maldives' pristine environment through energy reduction, waste minimization, marine conservation, and local community support. We use eco-friendly materials, local ingredients, and sustainable operations daily.

We invite you to join us in practicing responsible tourism. Together, we can preserve this paradise for future generations.

Thank you for being part of our journey.

A stylized signature of Rohit Chhetri in white ink.

Rohit Chhetri
General Manager

History of Islands of Maldives

The Maldives, a stunning chain of islands in the Indian Ocean, has a history that stretches back over 2,500 years. The earliest settlers likely arrived around 500 BC from South Asia, and the islands became an important hub for trade across the Indian Ocean. In its early years, the Maldives was a Buddhist kingdom, as evidenced by ancient ruins of stupas and temples found on the islands.

In 1153 AD, the Maldives converted to Islam when a North African Islamic scholar, Abul Barakat, influenced the local king to embrace the religion. The Maldives has been a Muslim country ever since, with Islamic law and customs shaping much of its culture and society. The sultanate system ruled the Maldives for centuries, with occasional external pressures from regional powers.

One of the most significant occupations in Maldivian history was by the Portuguese, who held the islands from 1558 to 1573. The Portuguese were eventually expelled by the national hero, Muhammad Thakurufaanu, whose revolt restored local rule.

In 1887, the Maldives became a British protectorate, though the sultanate retained internal control. The Maldives gained full independence from Britain in 1965 and became a republic in 1968. Ibrahim Nasir, the first president, initiated modernization efforts, and tourism began to take off during his presidency. Maumoon Abdul Gayoom, who followed Nasir, led the Maldives for 30 years, expanding tourism and infrastructure but facing challenges related to political freedom.

Tourism and Environmental Challenges

Tourism exploded in the late 20th century, transforming the Maldives into a world-renowned luxury destination. However, the country's low-lying geography makes it highly vulnerable to climate change and rising sea levels, which present a significant threat to its future. The Maldives has been vocal about climate action on the global stage, advocating for stronger efforts to combat these issues.

Modern Political Developments

In 2008, the Maldives transitioned to a multi-party democracy, electing Mohamed Nasheed as its first democratically elected president. Nasheed's government was marked by environmental advocacy but faced internal political struggles, leading to his ousting in 2012. Since then, the country has experienced continued political shifts, though it remains a popular and growing tourism destination.

Atoll Formations

The Maldives, a tropical paradise in the Indian Ocean. The country is made up of a chain of 26 Atolls, with around 1,200 coral islands (give or take, the islands are always changing!) The formation of the Maldives is a story that dates back millions of years.

The Maldives sits on a submarine ridge that runs from the southern tip of India to the Chagos-Laccadive Ridge. The islands were formed through a combination of volcanic activity and coral growth.

First Stage of Formation

The geological history of the Maldives is divided into three main stages. The first stage was the volcanic stage, which occurred around 60 million years ago. During this period, volcanic eruptions created a series of small islands, which later became the foundation for the coral reefs.

Second Stage of Formation

The second stage was the reef growth stage, which began around 30 million years ago. During this period coral reefs began to form around the volcanic islands, creating a unique ecosystem. The Maldives has some of the most diverse coral reefs in the world, home to hundreds of species of fish and corals.

Third Stage of Formation

The final stage was the coral island stage, which began around 10 million years ago. During this period, the volcanic islands sank, and the coral reefs continued to grow, eventually forming the Maldives we know today. The islands are now surrounded by shallow lagoons, which are home to a variety of marine life.

Today, the Maldives is a popular tourist destination, known for its pristine beaches, clear waters, and luxurious resorts. The marine life is like nowhere else, attracting divers and underwater enthusiasts from all over!

About our Language

Dhivehi is the official language of the Maldives. It is spoken by the Maldives' native population, which numbers roughly 340,000 people. Around 10,000 people in the Indian Lakshadweep Islands also speak Dhivehi.

With the influence of other languages such as Arabic, Hindi, Tamil, and English, the Maldivian language has evolved over time. As a result, Dhivehi contains many loanwords from these languages.

Dhivehi is taught in all Maldives schools and is used in all official papers and proceedings. Dhivehi is extensively employed in mainstream media outlets such as television, radio, and online newspapers.

While English is widely spoken in the Maldives, Dhivehi is still the primary language used at work, particularly in the construction industry. Many foreign workers from India, Sri Lanka, and Bangladesh learn Dhivehi due to the language barrier when communicating with colleagues and employers.

The Maldivian mother tongue language, Dhivehi, is an integral aspect of Maldivian culture and identity. It reflects the Maldives' unique history and traditions, and it remains a significant medium of communication for its people.

Local Culture and Traditions

The Maldives is a melting pot of cultural influences from South Asia, Africa, and Arabia, with its traditions deeply rooted in the sea. Music and dance are integral, with *Bodu Beru*, a traditional drumming performance, being a highlight of celebrations. Handicrafts like lacquered wooden items, woven mats, and *Dhoni* boat models reflect the Maldivians' craftsmanship and connection to their maritime heritage.

Fishing plays a central role in daily life, while local cuisine, featuring seafood and coconut-based dishes like *Mas Huni* and *Garudhiya*, showcases the islanders' reliance on the ocean. Islam shapes much of the cultural fabric, with religious festivals like *Eid* being celebrated across the islands.

The Maldivian language, Dhivehi, is spoken widely, and traditional attire is worn during special occasions. The coconut tree, a national symbol, is essential to local life, providing food, drink, and building materials. Rich in folklore and history, the Maldives also boasts iconic structures like the *Hukuru Miskiy* mosque, offering glimpses into the nation's past.

The Big Drums in Maldives Boduberu

Boduberu, is the big drums of the Maldives, a part of its culture and is the heart of traditional Maldivian music. The iconic big drum is made of wood from the coconut tree trunk, and the head is made from manta ray skin in the olden days. Today, the boduberu head is made from goatskin.

Boduberu, starts with a slow beat and with a soft tempo and incremental until it becomes very fast-paced drumming. This traditional music is generally performed by a group of 15 people with one lead singer, three drummers and dancers.

The dancers will start to dance based on the drumming tempo. The dancers will begin moving their body, raising their hand and making twist and different turn and be slightly be crouching and bending; in the traditional dancing style of the Maldives.

The songs "lava" that are sung during the drumming performances consists of old fisherman tales, mythical love stories, and sagas from toddy collectors to each other.

Traditionally, boduberu used to be played on occasions such as Eid celebration, when fishermen make a successful catch and sometimes after hard day work.

Boduberu is said to has its roots to Africa. Legends say that drums was brought up by the African slaves in the 18th century who were freed and became entertainers and musicians in the local community. The tradition continued for a long period of time and transformed to boduberu, as we know of today. Modern day boduberu is performed in weddings, corporate events and expos.

Code of Conduct

It is important to be respectful of the culture and religious beliefs of any destination we visit. Maldives is a Muslim country so you may cause offence if you are not properly dressed. Below is a list of activities and behaviors to be aware of as to be respectful and mindful of the culture and environment in the Maldives:

DO:

- Do purchase ethical souvenirs as this encourages growth and development for the country and they make great gifts for family and friends.
- Ethical souvenirs: Wooden Lacquer items, Coconut Crafts, Wood Carved artifacts, Wooden jewelry box, Mats.
- Do participate in our culturally connected activities to learn more about this beautiful destination.

DON'T:

- Do not purchase Sea jewelry. This includes moth-of-pearl, seashell, coral, turtle shell and black coral. Considering the endangered condition and environmental hazards, the exploitation of sea turtles and black corals has become forbidden in Maldives.
- Do not collect shells or take them from the beach. It is illegal to take coral out of the Maldives, in addition, shells are hermit crabs' homes! If you get caught taking coral or shells from the Maldives, you could face a hefty fine.
- Do not throw plastic or any form of garbage in the sea.

Environmental Mindfulness

At **Emerald Maldives Resort and Spa**, we prioritize educating our guests, team members, and local communities about environmental policies, offering practical guidelines to increase awareness. We've introduced several initiatives to support this cause:

Our "Green Book," a paperless guide, is available on the Emerald Maldives Mobile App, ensuring easy access for all guests during their stay. For our team members, the document is available on our Public Database, and we conduct regular refresher training sessions to reinforce environmental practices.

In every villa, guests can watch a brief video on IPTV (channel 2) that highlights essential tips on protecting the environment and respectful behavior while exploring the island's marine life.

Learning Traditions and Cultures of Maldives

To enhance the guest experience, we place **turndown cards** in guest villas, offering interesting facts about Maldivian history and traditions. These cards provide a simple yet meaningful way for guests to learn more about the culture during their stay.

Environmental Commitment

At Emerald Maldives Resort and Spa, we prioritize on preserving and protecting our environment as well as striving towards a more sustainable future for the Maldives.

- We shall monitor and ensure efficient use of our water to avoid and minimize waste.
- We will continue to place a high importance on reduction, reuse and recycling.
- We will continually work to improve the overall air quality and reduce pollution (both indoor and outdoor).
- We will concentrate on biodiversity conservation, preservation and restoration within the resort as well as nearby surrounding areas.
- We will continue to work closely with and support local communities.
- We will continue to improve the health, safety and well-being of team members, guests and local community.
- We are committed to comply with Maldivian and international legislative environmental requirements, such as environmental, public and occupational health and safety, hygiene and employment legislation.
- This environmental and social policy is freely available to all interested parties on request.

Waste Reduction

Reduce - Reuse - Recycle

Waste disposal and debris on beaches are major concerns in the Maldives. Unfortunately, in the Maldives, most resources and items that could be recycled or composted are at present treated as waste and transported from resorts and local islands to landfill.

At Emerald Maldives we have taken several measures to help the situation through waste reduction:

Recycling bins are placed in all the office and colleague accommodation areas.

Colleagues are educated on the importance of recycling and how to recycle.

We have reduced importing plastic bottled water, thereby reducing the amount of waste (glass and carbon emissions).

Energy-saving light bulbs with a long lifespan, purchases in bulk to avoid unnecessary packaging, the re-use of office paper, waste wood and other materials are some of the many measures, through which the amount of waste on the island is reduced.

Sustainability Drives

99% LED LIGHTS

We use energy-efficiency lights all around the resort; 99% of light bulbs are LED and the remaining bulbs are CFL, which eventually will be replaced too.

WATER BOTTLING PLANT

By producing our own water, we can eliminate the use of more than 200,000 plastic bottles per year.

TREATED WATER WASTE

Treated wastewater is used for irrigation purposes that allow us to save a considerable amount of portable water

LOCAL FISH

All local varieties of fish are caught by the local fisherman. Only specialty items are imported.

Sustainability Drives

Guest Area

Energy Saving Sensors

If there is no movement, the AC and lights will be completely switched off after 7 minutes. The AC will continue to run until all doors are closed.

Solar Powered Water Heaters

Guest villas use hot water generated from solar panels. This initiative is expected to save our total energy consumption by 20%

Bed Linens and Towels

Encouraging our guests to change linens and towels every alternative days.

Ethical Purchases

Emerald Maldives Resort and Spa are proud to collaborate with our suppliers to reduce environmental impact and promote social and ethical practices, strictly adhering to Maldivian laws. We prioritize local products, suppliers, and service providers to minimize carbon emissions from transport and support the local community. Whenever possible, we choose environmentally friendly, biodegradable cleaning products, pesticides, and packaging materials over chemical or disposable alternatives. Additionally, we encourage our guests to purchase local souvenirs to further support the community.

Ethical Souvenirs

Local Arts and Crafts

Every Sunday and Monday at Aqua Restaurant, alongside our Traditions of Maldives themed dinner, we showcase and sell beautiful local arts and crafts made by talented artisans from the Maldives. This gives our guests the opportunity to take home a piece of Maldivian culture while directly supporting local artists and their craftsmanship.

From handcrafted souvenirs to traditional Maldivian artwork, these unique items reflect the rich heritage and artistry of the Maldives. By purchasing these crafts, guests not only enjoy authentic, handmade treasures but also contribute to the preservation of local traditions and sustainable livelihoods within the community.

Local Community Awareness

Exploring Local Islands

These adventures are a great experience to see the Maldivian lifestyle, learn and understand more about the way that they live. This is also a lovely opportunity to purchase authentic souvenirs.

Male: The Capital island Visit

Visit the capital city of Maldives, explore its Heritage; the Sultan's Park, The Islamic Centre, Hukurumickiy and the Fish Market are popular tourist attractions. These tourist spots are just walking distance from each other and since you are in the city don't forget to fill up on supplies and souvenirs at the local shopping district.

Discover our Flora

Coconut Palm

Coconut Palm, *Cocos nucifera*, is a member of the family (palm family). It is the only accepted species in the genus *Cocos*. The term coconut can refer to the entire coconut palm, the seed, or the fruit, which, botanically, is a drupe, not a nut. You can recognize the Coconut Palm because it has a single trunk and at the top there is a crown of feather-like fronds. You will often also see bunches of large fruits called coconuts. The coconut consists of a thin hard skin, a thicker layer of husk, the hard (coconut) shell, the white kernel and a large cavity filled with coconut milk. Coconut palms can be up to 30 m tall.

Screw Pine

Screw Pine family refers to around 600 tropical species of the genus *Pandanus* spread out in Southeast Asia and the Pacific region. It refers to the various plants and shrubs of the screw pine family. The screw pine is mainly characterized by the presence of aerial prop roots and by the long narrow leaves which are spirally arranged in clusters. The fruits look like an orange colored pineapple, and consist of many small parts.

Hibiscus

Hibiscus is a quite large plant, containing several hundred species that are native to warm-temperate, subtropical and tropical regions throughout the world. Member species are often noted for their showy flowers and are commonly known simply as hibiscus, or less widely known as rose mallow. It is of red and white colors. It is an example of complete flowers.

Water Spider Lily

Water Spider Lily is a member of the amaryllis family has long strap-like leaves that form a fountain radiating up and then arching out and down. Individual leaves are about two and one-half inches wide by over two feet in length with a center rib forming a crease down the middle. The ghostly blooms are at the top of a nude stalk that reaches thirty inches or more.

Beach Naupaka

Original name is *Scaevola Taccada*; is a flowering plant in the family of Goodeniaceae found in the coastal locations in the tropical areas of Indo-Pacific. It is a common beach shrub throughout the Arabian Sea, the tropical Indian Ocean and the tropical Islands of the Pacific. It is an erect, spreading, evergreen shrub or small tree with somewhat succulent, soft-wooded, pithy stems. It usually grows up to 4 m tall.

Dracaena

Dracaena Reflexa is a popular houseplant with origins in Madagascar and other Indian Ocean islands. Dracaena plant care is fairly simple, and they can even withstand a certain amount of neglect. A multi-stemmed shrub with whorls of strappy green and yellow variegated leaves. A very adaptable plant which can be grown in full sun outdoors, or in lower light levels indoors. Best of all, dracaena help purify the air we breathe.

Polyscias Guilfoylei

This plant is commonly known as *Geranium Aralia* or *Wild Coffee*, is a tropical evergreen shrub prized for its striking, glossy foliage, with compound leaves featuring rounded, serrated leaflets often edged in creamy white or yellow variegation. Growing slowly to about 1.5 metres indoors, it makes an attractive ornamental houseplant that thrives in bright, indirect light with consistently moist, well-drained soil, though it is sensitive to cold and must be kept warm.

Discover our Fauna

Grey Heron

Maakanaa

This is a large bird that stands between 90 to 100 cm tall and can weigh up to 2 kg. It feeds in shallow water on fish, insects, small reptiles and mammals. You will often see the heron standing still or moving slowly when it's stalking its prey. The loud croaking, referred to as "fraanak" is its characteristic call. The Grey Heron builds bulky stick nests when breeding.

Common Tern

Valla

This migratory bird, commonly referred to as the 'Sea Swallow', visits the Maldives in winter and breeds in Europe, Asia and North America. This bird feeds by plunge diving for fish in the sea, lakes & rivers. Common Terns are known to reach the age of 23 years or more.

Whimbrel

Bulhithunbii

This migratory wader visits the Maldives in the winter and breeds across the Sub Arctic, Europe, parts of Asia and Scotland. It is a coastal bird during migration & feeds by probing soft mud for crabs and similar prey.

Oriental Garden Lizard

Bon'du

The *oriental garden lizard (Calotes versicolor)*, also called the eastern garden lizard, Indian garden lizard, common garden lizard, bloodsucker or changeable lizard, is an agamid lizard found widely distributed in Indo-Malaya. It has also been introduced in many other parts of the world. Changeable lizards eat mainly insects such as crickets, grasshoppers, and ants; as well as small vertebrates, including rodents and other lizards including common house geckos and day geckos.

Yellow Bittern

Dhon Raabondhi

This is a small species which measures only 38 cm in length with a short neck and a long bill. They can be difficult to see due to their shrub habitat and skulking lifestyle, they fly frequently, when the striking contrast between the black feathers and otherwise yellowish plumage makes them unmistakable. They nest in shrubs or reed beds and lay to 6 eggs at a time. This bird feeds on insects and fish.

Indian Fruit Bat/ Flying Fox

Vaa or Vaalu

These are among the world's largest bats, with a 1.5-meter wingspan. Named "flying foxes" for their fox-like faces and reddish fur, they roost upside down in trees, resembling dark fruit clusters. Mothers carry pups under their bellies. Though called fruit bats, they eat nectar, pollen, and soft fruits like mangoes. Stop by TGI Dive Center and check the front tree for them!

Our Extroverted Neighbor

White-Breasted Waterhen

If you ever hear what sounds like a maniac violently cranking a rusty water pump, you probably have just met the White-breasted Waterhen (*Amaurornis phoenicurus*).

Dressed in a crisp white tuxedo and a charcoal jacket, this distinguished little bird boasts a wonderfully bizarre personality that completely defies its elegant attire.

While its broader family (the rails) are notoriously secretive introverts that flatten their bodies to slip silently through the shadows, the Waterhen completely missed the memo on shyness. To communicate through thick, acoustic-muffling reed beds, it belts out a deafening, mechanical "ru-wak, ru-wak" for up to fifteen minutes straight. Sounding off at dawn, dusk, or the dead of night, it is nature's most jarring alarm clock. The island's heavy metal vocalist.

As they forage, you'll notice what looks like a persistent, nervous tic: they constantly flick their short tails skyward. Behind this apparently anxious behavior, there is a clever visual strategy. Each flick flashes a hidden patch of vibrant, rusty-red feathers. Like a tour guide hoisting a brightly colored flag in a crowded museum, this flash helps pairs stick together in thick brush while simultaneously warning predators "I see you, don't bother ambushing."

The great irony of the "Waterhen," however, is that it can barely swim. If it somehow ends up in deep water, it will paddle awkwardly to the nearest shore. Instead of webbed feet, it has evolved incredibly long, widely splayed toes. These act as biological snowshoes, distributing their weight so they can sprint effortlessly across floating lily pads, tangled vegetation, and soft mud without sinking.

Unusually bold and totally unbothered by humans, these extroverted little birds are everywhere. Whether they are strutting past your villa, jaywalking across the road, or casually exploring an outdoor restaurant, the White-breasted Waterhen is an eccentric island character you won't soon forget.

Discover our Marine Life

Sea Green Turtle and Hawksbill Sea Turtle

The *Green Turtle* is the most common turtle species in the Maldives. It is herbivorous and mainly feeds on algae and sea grass. Due to the differing diet of the *Hawksbill Turtle* (mainly invertebrates in the reef) and differing breeding grounds. The two species are not in direct competition, but they do face the same human threats of egg-harvesting, habitat destruction and hunting. Hawksbill turtles are commonly spotted around Raa Atoll, they can be found on reefs. Join us for "Turtle Snorkeling Excursion" with TGI Dive Center to get the chance to see them".

Giant Moray Eel

Ven

They spend the day in the rocks with their head outside, and come out at night. They are usually friendly. They breathe with open mouths, so they look like they are threatening. But actually they are not. However, if disturbed, they may attack.

Stingray

Madi

They are benthonic species, always in contact with the bottom, because they get food from little crabs and fishes which live in the sand. They are friendly animals, but they can be dangerous because of their camouflage. Stingrays have a poisoned spine in the tail. Torpedo are extremely rare in the Maldives. Both are oviparous animals, and they can give birth only several times in their life because of the long gestation period. Stingrays that are commonly spotted are: Cowtail Stingray, Blotched Fantail Ray and Porcupine Ray.

Manta Ray

En Madi

We're lucky to have *Reef Manta Rays*—gentle, intelligent giants—right here in Raa Atoll. Sightings peak from August to November, but they're around most of the year, drawn by plankton-rich currents. With a 3-meter wingspan, they're harmless and often curiously circle snorkelers while filter-feeding. Each manta has unique spot patterns on its belly, like a fingerprint. Join TGI Dive Center's "Manta Snorkeling Quest" for a chance to swim with them!

Spinner Dolphin

The *Spinner Dolphin* is the most sighted and abundant cetacean species in the Maldives. School sizes vary between very few and hundreds of individuals, generally increasing in average size the more distant the school is from the shore – probably an important anti-predation mechanism. They are particularly famous for their acrobatic displays in which they spin longitudinally along their axis as they leap through air. The reason for the spinning is not known; possible reasons may be to display dominance, to communicate their location, to hunt, to shake off parasites or remoras (fish attaching themselves to the dolphin's skin). They are extremely shy and it is incredibly unlikely they can attack humans. In fact usually as soon as we enter the water they run away unfortunately.

Land Hermit Crab

Baravelli

All *Land Hermit Crabs* are found along our beaches or amongst the island's rich vegetation. They have adapted to a life outside the sea. As opposed to their close relatives in the reef, they do not breathe through gills but through wrinkled, thin, capillary-rich skin at the tip of their soft hind body. As hermit crabs grow, they must exchange their shell for a larger one. Since shells are not an unlimited resource, there is frequently strong competition among the hermit crabs for the available shells. Land hermit crabs are omnivorous scavengers and feed on all types of dead organic matter.

Turtle Tales: Nest and Hatchling Magic

Sea Turtles

Sea turtles are fascinating marine reptiles. Each one has its own unique "fingerprint"—the spot pattern on the sides of their faces, also known as *scutes*—which helps us tell them apart.

They are master navigators; mature sea turtles return to the same beaches where they were hatched to nest. Since Emerald Maldives is a natural island, we have the opportunity to welcome Hawksbill sea turtles coming ashore to lay their eggs between June and September.

The process: Sea turtles come onto the beach, dig deep holes in the sand with their flippers, and lay up to 200 eggs in a single clutch. Hatchlings generally emerge after 50–70 days, most commonly at night or in the early morning hours, using moonlight as a natural navigational guide to reach the sea.

Here at Emerald Maldives, we are committed to protecting and respecting these endangered species. Signs and restricted areas will be placed around nests to prevent disturbance. Please be careful not to stand on or too close to these zones. Once hatchlings emerge, it is a rapid race to the sea—so please do not touch or handle them. Flashlights are strictly prohibited, as artificial light confuses their navigation; instead, red-light torches should be used.

Protect our Marine Life

At *Emerald Maldives Resort and Spa*, we take all precautions to protect and maintain our beautiful coral reef. We kindly request all our guests to avoid touching, breaking or standing on the coral. Do not attempt for fishing from your villa or anywhere else in the Resort.

We are eager to preserve the natural environment, and we encourage our guests to join us by refraining from littering into the lagoon.

DO NOT

Feed fish

Take marine life - dead or alive

Litter

Wear gloves

Touch, kick, step or sit on corals

Touch, chase, harass, spear or capture marine life

Use non-reef safe sunscreen before going to ocean

Snorkeling Guidelines

There are No Lifeguard on Duty.

Please follow below guidelines for your safety

ALWAYS snorkel with a buddy.

DO NOT stand / walk on the reef.

DO NOT touch the corals and the fishes.

DO NOT collect shells.

BE CAUTIOUS of boats, catamarans, windsurfers, canoes, seaplanes.

BE CAUTIOUS by not hanging on the ropes around the buoys as you may get a rash due to the marine biofouling (living organisms such as algae, barnacles and mussels that may attach to underwater structures)

If you are not a good swimmer, WEAR A LIFE JACKET.

BEGINNERS – BE CAUTIOUS - Practice inside the lagoon before going out.

BEGINNERS: take a guided snorkeling tour organized by Water Sports, or seek assistance at the Water Sports.

BEWARE OF STRONG CURRENTS - ask for advice from the Water Sports.

IN AN EMERGENCY - wave your hands above the water and ask for "HELP".

NO FISH WILL ATTACK YOU - as long as you respect them.

VISIT our Dive and Marine Center TGI upon arrival to ensure your safety and enjoyment.

Please clear all your DOUBTS by contacting TGI team before going in the water.

Swimming Guidelines

Other Swimming Guidelines:

- Swim on designated areas and check the flag color for swimming condition.
- Provide close and constant attention to children; Never leave a young child unattended near water. Avoid distractions when your child is in or around water.
- If you are not a confident swimmer, we highly recommend wearing a life jacket while enjoying water activities.
- Be aware of ocean waves and rip currents.
- Night swimming is prohibited. We do not encourage guest to swim after 18:30hrs for safety reasons.
