

10x10 PROGRAMME

13:30 - 13:35

10x10 Introduction by Steve Hone DCA CEO

13:35 - 13:45

10x10 Update
Beyond Glycol – Simplifying Heat Rejection
Vincent Hoste – Evapco

13:45 - 13:55

10x10 Update
The Unseen Architecture Behind Every Reliable Data Centre
Peter Aspin – Legrand

13:55 - 14:05

10x10 Update
The Advent of Microgrids for Data Centre Power
Phil Reid – Red Engineering

14:05 - 14:15

10x10 Update
The Importance of Using Cable Cleats in Data Centres
Brian O'Neill – CMP Products

14:15 - 14:25

10x10 Update
James Behan – Chainergy

14:25 - 14:35

10x10 Update
Powering the AI Revolution
Craig Doyle – Wesco | Anixter

14:35 - 14:45

10x10 Update
Designed to be Built
Zac Potts – Sudlows

14:45 - 14:55

10x10 Update
What coming down the utility track in 2026/27
Richard Koszykowski – MEUC (Major Energy Users Council)

14:55 - 15:05

10x10 Update
Keith Maclean-Martin – Pillar

15:05 - 15:15

10x10 Update
Powering AI Infrastructure with New Nuclear
Doreen Abeysundra – Fresco Clean Tech Solutions

15:15 - 15:20

WRAP UP & CLOSE

10x10 Update Briefing

Beyond Glycol - Simplifying Heat Rejection for Efficiency and Sustainability

Presented by:

Vincent Hoste

Sales Application Manager

Data Centers EMENA

Evapco

Learn how effective frost protection can cut your cooling system's power consumption by up to 50%, while simplifying system design and delivering a cleaner, greener, and more efficient solution.

Power Ex Live London

10x10 Update Briefing

The Unseen Architecture Behind Every Reliable Data Centre

Presented by:

Peter Aspin

Technical Sales Manager

Peter.aspin@legrand.com

Legrand

Powered by

Often unseen but always essential, UPS systems form the backbone of data centre resilience. This session explains how a UPS works, why it matters, and how modular design improves uptime, efficiency, and right-sizing. Learn how modern architectures deliver flexible, scalable power protection that keeps critical operations running without interruption.

Power Ex Live London

10x10 Update Briefing

The Advent of Microgrids for Data Centre Power

“Providing a resilient and future-proofed system in a fast-changing energy “

Presented by:

Phil Reid

Head of Energy Transition
Red Engineering

The delivery of the transition to green energy at the required level of resilience for data centres will involve the smart microgrid at the core of system to provide the necessary flexibility, scalability and future-proofing to allow the operational optimisation of supply, generation and storage assets.

10x10 Update Briefing

The Importance of Using Cable Cleats to effectively secure cables in Data Centres

Presented by:

Brian O'Neill

Brian.oneill@cmp-products.com

Business Development

Manager -Datacentres

CMP Products

Join CMP Products for an insightful presentation which explores why cable cleats are essential for protecting Data Centres during the commissioning and operational phases of their life and their significance according to IEC 61914 standards. Through a suite of videos, witness first-hand the consequences of inadequately secured cables when exposed to short circuit conditions.

10x10 Update Briefing

Powering the AI Revolution:

“Innovative electrical solutions to accelerate data centre deployments”

Presented by:

Craig Doyle

Senior Director - EMEA

Data Centre Sales

craig.doyle@wesco.com

Wesco - Anixter

As demand for AI-ready infrastructure surges, strategic partnerships and innovative electrical solutions are redefining speed, reliability and scalability in the data centre market.

10x10 Update Briefing

Designed to be Built

Presented by:

Zac Potts

zacpotts@sudlows.com

Head of Sustainability &
Innovation

Sudlows have been designing, building and project managing data centres of all shapes and sizes since 2013.

With Sustainability and Innovation at its core Zac will explain why adopting modern construction methods can really help to improve Costs, programme and quality.

What coming down the utility track in 2026/27

Presented by:
Richard Koszykowski
Energy Advisor
RichardK@meuc.co.uk
MEUC

The MEUC represents the interests and views of many of the UK's largest and most complex energy users — across both the private and public sectors.

This diversity gives MEUC a uniquely comprehensive view of how energy challenges cut across the UK economy.

Powering AI Infrastructure with New Nuclear

Presented by:

Doreen Abeysundra

Principal | Founder

Fresco Clean Tech Solutions

With AI Increasingly partnering or replacing human intelligence, the International Energy Agency forecasts a need to double global electricity generation by 2030 to power this advancement. Data Centers need at least the "Five Nines" to operate efficiently and most nations hope to observe decarbonization targets. Nuclear power offers low-carbon baseload: is this the solution to the energy gap?
