Quality As A Service

About Assurdly

Assurdly

We *deliver* software projects. It's that **simple**.

Assurdly ensures Business success by partnering to ideate, build and deliver high-quality software solutions. With operational flexibility, we integrate into our clients' business operations to define and implement software that achieves business goals.

Our tailored solutions offer diverse options to meet client needs.

Product Delivery and Management

Bringing ideas to life can be challenging. As bright as the idea of innovation is, it needs the right people, tools and processes to convert it to a product or a service, to gain the desired ROI. We can help achieve this.

- **Customer Intimacy -** Reviewing the product idea and help elicit hidden requirements. We ensure conformance of ideas with business goals.

- **Documentation and Alignment**- We produce documentation artefacts to ensure collaboration, reflect progress and report on activities.

- **Management and Delivery -** We will do the heavy lifting of coordinating the development team and other project activities till completion.

10+ Clients

This service goes hand-in-hand with our Quality Assurance, Software testing and Project Management services, to ensure successful delivery.

Software Testing

Software products and services will always need to delight end users, to be successful. We go a lot deeper than this.

- **Test strategy, planning and execution** - Defining the testing approach and testing the product will ensure extensive coverage of all user flows and features.

- **Defect Management** - We will own identification and reporting of bugs and work with the team to ensure they are resolved, retested and signed off.

- **Test Reporting** - Ensuring visibility of the testing progress by sharing detailed report summaries.

Our Test Offerings

- Manual and automated API functionality testing
- Usability testing and Performance testing

20+ Clients

Where applicable, especially with the APIs and core functionality, automated test script would be curated so the test can be executed repeatedly on your CI/CD.

Quality Assurance Coaching

We understand that businesses sometimes struggle with identifying the approach to take when it comes to Quality Assurance and this is where we come in.

- **As-Is Analysis** - understanding your current development strategy, discovering bottlenecks and recommending solutions.

- **Gap Remediation** - Defining unique strategies that best suit your product/system development process.

- **Team Support and Adoption** - Supporting your team in adopting the new process, ensuring quality is ingrained in all software development stages.

Compliance and Certification Support

There are regulations guiding Financial Compliance but some businesses do not know the right steps to take to conform with these regulations and get certified. We are happy to help in this regard.

- **Gap Analysis** - reviewing client processes in relation to government regulations and developing new processes to align with set laws.

- **Gap Remediation** - assisting in closing out identified gaps in attaining the desired certification or licence.

- **Assessor Engagement** - on your behalf, we would engage directly with the assessors or regulators for the purpose of the certification.

Project Management

We manage time, budget & resources to ensure the best project outcome and ensure your business idea is taken from conception to completion. This is our specialty and we guarantee expert project handling.

- **Work Breakdown** - By considering each moving piece on the project, we collaborate with you to plan the delivery roadmap.

- **Stakeholder Engagement** - We are the interface for communication, scheduling and collaboration between all concerned parties.

- **Monitoring and Reporting** - Communicate project timelines or any deviations from them and presenting weekly reports of team efforts.
