

The neXtgen Sheep Producer

neXtgen
AGRI

Farming in our hearts, **science in our heads.**

A photograph of three people (two men and one woman) sitting around a wooden table in a bright room with large windows. They are looking at a laptop screen which displays a diagram with three blue triangles. The man on the left is wearing a blue shirt and a cap. The man in the middle is wearing a dark shirt. The woman on the right is wearing a blue jacket.

Go neXt level.

We've designed our sheep producer service offering to be flexible and scalable to your flock size and goals. You can build your own package from the options below, or choose our highly recommended combination. Part of partnering with neXtgen Agri is the ability to regularly discuss opportunities and challenges and seek guidance from the team.

Flock policy and objective, ram team selection and ongoing support

neXtgen
AGRI
neXtSelect

This is the core of our offering to sheep producers. We discuss your flock policy, clarify your breeding objective, help you make important decisions around where you source rams from and compare the options. This includes an annual ram team audit, helping you determine which rams need to be replaced and which ones should stay. To help bring rigour to these decisions, we work with you to develop a neXtSelect custom index to compare ram catalogues or rams within a catalogue.

EID and data management

neXtgen
AGRI
neXtRecord

Take the complexity out of EID data. From initial setup through to ongoing management, we coordinate your data collection, ensure accuracy, and organise everything so you can make informed decisions without the admin. This includes troubleshooting hardware issues and maintaining data integrity across systems. We make sure your data is kept safe and sound, and we get it back to you in any form you prefer. neXtRecord software is included as part of this package option. It has been designed for efficient data storage and use.

Strategic selection of replacement ewes can accelerate flock improvement. We help you select the replacement ewes that best suit your breeding objective. Where possible, we combine visual assessment with data-driven ranking (neXtRank) to identify the ewes that will drive productivity gains. This service gives you the confidence that you're retaining the right genetics while culling the underperformers.

Replacement ewe classing
