

The neXtgen Bull Breeder

neXtgen
AGRI

Farming in our hearts, science in our heads.

Go neXt level.

We have designed our service offering so that you can adjust it to your needs and so that it works in with other services you utilise across your business. You can build your own service offering from the options below. Part of partnering with neXtgen Agri is the ability to regularly discuss opportunities and challenges and to seek guidance from the team.

Strategy, planning, oversight and review

neXtSelect

neXtPlan

This is the core of our offering to bull breeders. We work with you to define and develop business goals, breeding objectives, strategies and action plans across your bull-breeding business. We are there to be on your team, helping you achieve your goals. This includes **neXtSelect** index development and delivery (we design an index specifically for your herd, tailored to your breeding goals) and **neXtPlan** (a customised data-recording calendar and optional reminders). We are also available to speak at your field days and webinars.

Data management

neXtRecord

We let you focus on managing the cattle, and we focus on making sure the data is combined, collated and organised so that you can use it when you need it. This includes keeping track of all records as well as sorting out and tracking DNA sampling. We make sure your data is kept safe and sound, and we get it back to you in any form you prefer. **neXtRecord** software is included as part of this package option. It has been designed for efficient data storage and use.

Data submission for breeding values

We make sure your breed society has everything they need to provide accurate breeding values. We troubleshoot problems and make sure the breeding values you're relying on are as accurate as possible.

Bull classing and sire team management

nextgen
AGRI
neXtClass

Selecting which bulls are retained and which are sold is a key decision each year. We will be there with you to provide our advice on which bulls are best suited to your program, including AI options. We always combine the data with what we can see to help guide the process. Your **neXtSelect** index can be powerful here, and your custom **neXtClass** screen ensures you are fully informed when making decisions.

We help you select replacement stock, highlighting the link between how animals look and how they measure. Structural scoring (either prior to or at the same time as selection) is highly recommended. Your **neXtSelect** custom index can be a key guide in helping this process. We get the data set up on **neXtClass** so that well-informed decisions can be made.

Heifer and cow classing and selection

Mating allocation

nextgen
AGRI
neXtMate

Our **neXtMate** software optimises your matings, resulting in faster genetic progress while avoiding inbreeding. When paired with your **neXtSelect** index, this tool can rapidly accelerate genetic progress down your chosen path. The impact of potential AI sires or bulls available for purchase can be estimated before spending a dollar.

On-farm data and DNA collection

Some people like to do all the work themselves, some like us to help. We are available to measure, score and sample as an extra pair of technical hands or to free up your time to get on with managing the business. DNA sampling, structural scoring, and recording data are all things that we can help you with.

Designer breeding values

Custom breeding values for traits specific to your herd. Importantly, your **neXtBV** custom breeding values can be combined with industry breeding values in your own custom index. Innovative breeders are always looking for new traits to incorporate; now you don't have to wait.

Partnership pricing

We'll work with you to determine the best combination of services to suit your needs. Prices are GST exclusive and do not include any direct costs of travel or consumables used on your behalf.
