the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999. The number of people aged 65 years and over has increased by 0.2 billion, from 0.2 billion in 1980 to 0.4 billion in 1999.

These changes in the world population have led to a number of challenges for the world's governments. The first challenge is to ensure that the world's resources are distributed fairly. The second challenge is to ensure that the world's environment is protected. The third challenge is to ensure that the world's population is healthy and happy.

The first challenge is to ensure that the world's resources are distributed fairly. The world's resources are not distributed fairly. The rich countries have more resources than the poor countries. The rich countries have more money, more land, and more people. The poor countries have less money, less land, and less people.

The second challenge is to ensure that the world's environment is protected. The world's environment is being destroyed. The rich countries are polluting the world's air and water. The poor countries are cutting down the world's forests. The world's climate is changing.

The third challenge is to ensure that the world's population is healthy and happy. The world's population is not healthy and happy. The rich countries have more people who are healthy and happy. The poor countries have more people who are sick and poor. The world's population is growing too fast.

These challenges are the result of the world's population growth. The world's population is growing too fast. The world's population is growing faster than the world's resources. The world's population is growing faster than the world's environment. The world's population is growing faster than the world's health and happiness.

The world's population is growing too fast. The world's population is growing faster than the world's resources. The world's population is growing faster than the world's environment. The world's population is growing faster than the world's health and happiness. The world's population is growing too fast.

The world's population is growing too fast. The world's population is growing faster than the world's resources. The world's population is growing faster than the world's environment. The world's population is growing faster than the world's health and happiness. The world's population is growing too fast.

The world's population is growing too fast. The world's population is growing faster than the world's resources. The world's population is growing faster than the world's environment. The world's population is growing faster than the world's health and happiness. The world's population is growing too fast.

The world's population is growing too fast. The world's population is growing faster than the world's resources. The world's population is growing faster than the world's environment. The world's population is growing faster than the world's health and happiness. The world's population is growing too fast.

The world's population is growing too fast. The world's population is growing faster than the world's resources. The world's population is growing faster than the world's environment. The world's population is growing faster than the world's health and happiness. The world's population is growing too fast.

The world's population is growing too fast. The world's population is growing faster than the world's resources. The world's population is growing faster than the world's environment. The world's population is growing faster than the world's health and happiness. The world's population is growing too fast.

The world's population is growing too fast. The world's population is growing faster than the world's resources. The world's population is growing faster than the world's environment. The world's population is growing faster than the world's health and happiness. The world's population is growing too fast.

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999. The number of people aged 65 years and over has increased by 0.2 billion, from 0.2 billion in 1980 to 0.4 billion in 1999.

These changes in the world population have led to a number of challenges for the world's governments. The first challenge is to ensure that the world's resources are distributed fairly. The second challenge is to ensure that the world's environment is protected. The third challenge is to ensure that the world's population is healthy and happy.

The first challenge is to ensure that the world's resources are distributed fairly. The world's resources are not distributed fairly. The rich countries have more resources than the poor countries. The rich countries have more money, more land, and more people. The poor countries have less money, less land, and less people.

The third challenge is to ensure that the world's population is healthy and happy. The world's population is not healthy and happy. The rich countries have more people who are healthy and happy. The poor countries have more people who are sick and poor. The world's population is growing too fast.

These challenges are all interconnected. The world's resources are not distributed fairly, which leads to environmental problems. The world's environment is being destroyed, which leads to health problems. The world's population is growing too fast, which leads to all of these problems.

The world's governments need to work together to solve these problems. They need to ensure that the world's resources are distributed fairly. They need to protect the world's environment. They need to ensure that the world's population is healthy and happy.

The world's governments need to work together to solve these problems. They need to ensure that the world's resources are distributed fairly. They need to protect the world's environment. They need to ensure that the world's population is healthy and happy.
