the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999. The number of people aged 65 years and over has increased by 0.2 billion, from 0.2 billion in 1980 to 0.4 billion in 1999.

These changes in the world population have led to a significant increase in the number of people who are under 15 years of age, from 1.1 billion in 1980 to 2.3 billion in 1999. This increase has been driven by a combination of factors, including a decline in the death rate, a decline in the birth rate, and a decline in the age at which people are having children.

The decline in the death rate has been a major factor in the increase in the number of people under 15 years of age. This decline has been driven by a number of factors, including a decline in the death rate from infectious diseases, a decline in the death rate from non-communicable diseases, and a decline in the death rate from violence.

The decline in the birth rate has also been a major factor in the increase in the number of people under 15 years of age. This decline has been driven by a number of factors, including a decline in the birth rate from developed countries, a decline in the birth rate from developing countries, and a decline in the birth rate from the world as a whole.

The decline in the age at which people are having children has also been a major factor in the increase in the number of people under 15 years of age. This decline has been driven by a number of factors, including a decline in the age at which people are having children from developed countries, a decline in the age at which people are having children from developing countries, and a decline in the age at which people are having children from the world as a whole.
