

Device Control

The best solution to manage and track wearable scanners

- Optimize asset utilization to maximize ROI
- Spend less time managing devices
- Keep track of devices & avoid costly scanner replacements

INSIGHT
Control

Enhanced Capture

The most comprehensive solution for smarter scanning operations

- Capture barcodes faster with fewer errors in complex tasks
- Document processes with images
- Optimize scan productivity with clear, actionable insights

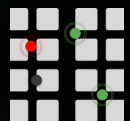

INSIGHT
Enhance

Warehouse Productivity

The visual and real-time solution for warehouse efficiency - no tinkering or WMS changes needed

- Benchmark and compare performance with ease
- Boost ROI with better layouts and less manual reporting
- Optimize your resource allocation
- Spot inefficient walking paths and congestion zones

INSIGHT
Warehouse 360

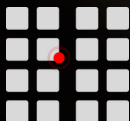

Device Utilization

Ensure your devices are actively being used, correctly allocated, and performing as expected.

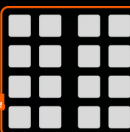

Device Management

Remotely monitor and manage your fleet by ensuring all devices are updated, properly configured, and proactively checked for potential issues.

Lost & Found

Quickly locate misplaced devices and reduce shrinkage across your operations.

Gatekeeper & Warehouse Zoning

Define access rules (no-go and use-case zones) and create dedicated zones for specific workflows to prevent accidents, reduce operational errors, and further minimize device loss.

INSIGHT Control

INSIGHT Control +

Advanced Scanning

Increase efficiency by capturing many items in a single scan and scanning the most complex labels without errors in one go—increasing capture speed by 5x.

Photo Documentation

Document outgoing palettes or broken boxes without interrupting workflows.

Scan Analytics

Understand process usage & get automatic insights on how to optimize your scanning efficiency. Also includes API access to your scan data.

INSIGHT Enhance

INSIGHT Enhance +

Warehouse KPIs

Gain insights into cost structure and ergonomics with reliable KPIs, blending data from the WMS and ProGlove scanners.

Layout Visibility

Optimize the use of space and item placement to improve ergonomics and reduce costs due to layout inefficiencies.

Workload Visibility

Understand optimal workload allocation and improve scheduling decisions with real-time fluctuation alerts.

Process Visibility

Identify outliers, detect congestions, check for workflow compliance, and gain visibility into optimal walking paths.
